GREATISH PVT LTD
AI SYSTEMS BLUEPRINT

GREATISH PVT LTD, owned by Ajay Kumar, manufactures and sells construction chemicals, waterproofing chemicals, industrial chemicals and machinery to builders, contractors, infrastructure developers, industrial units and dealers, in the ₹50 lakh to 1 crore a month turnover band. Money comes in through field sales executives and dealers across cities, booked in Tally Prime, Excel, Google Sheets and WhatsApp with no integrated system between them. This document proposes three spines built over twelve weeks: a plant core, a field sales core and an accountability core, each with its own auditor reporting into one daily note, holding the owner's time at the 1 to 2 hours a week he set. Added up conservatively from the pages that follow, the build returns around ₹1.25 lakh a month and close to 300 hours a month now spent by the owner and his managers.

PREPARED FOR
AJAY KUMAR
BLUEPRINT AUDIT 10.11.2026
GREATISH PVT LTD

01 THE NUMBERS DASHBOARD TILES · AS PROVIDED BY CLIENT

Not stated LEADS A MONTH NOT ANSWERED	**Not stated** QUOTES A MONTH NOT ANSWERED	**Not stated** OUT OF 100 QUOTES NOT ANSWERED	**Not stated** ORDERS A MONTH NOT ANSWERED	**Not stated** AVERAGE ORDER VALUE NOT ANSWERED	**Not stated** SALES CYCLE NOT ANSWERED	**Not stated** REPEAT CUSTOMERS NOT ANSWERED	**Not stated** TOTAL HEADCOUNT NOT ANSWERED

The numbers sheet was left entirely blank. The only figure on record is the turnover band, ₹50 lakh to 1 crore a month, as ticked. Nothing on this sheet counts leads, quotes, orders, order value, cycle length, repeat customers or headcount, and no saving in the pages behind it is scaled from those counts; every rupee and hour figure is kept deliberately low for the band. One reference point from the owner's own writing: he expects the field team to reach 50 to 100 or more executives, which is a target he stated, not a headcount today. There are no contradictions to flag because there are no figures to contradict each other; the gap itself is the finding. The first next step is to fill these eight tiles, because the Sales Command Board and the Plant Board will begin producing these very numbers from day one and there is nothing yet to check them against.

02 WHAT HAS BEEN TRIED, AND HOW THE BUSINESS SPLITS BEFORE / AFTER

ADOPTION

Tally Prime, Excel, Google Sheets, WhatsApp, email

Was: In his words: all of these are in use for different jobs, some automation tools too, but no integrated ERP, CRM, HRMS or AI system exists for GREATISH; coordinating between tools, entering data, collecting information from staff and watching the work takes heavy manual effort.

Now: Tally Prime stays as the book of account. Store Gate, the Beat App and the Task Desk sit around it and post matched entries in, so a purchase, an order or a collection is typed once. WhatsApp stays as the channel the reports arrive on, not the place the records live.

TRUST

Employee reports versus real records

Was: In his words: he must himself check every employee's attendance, location and daily productivity, ask again and again for status and pending work, and cannot tell who only marks attendance and who actually brings customers, orders, sales and payments.

Now: Every claim is matched to a record the employee did not write: a visit to a GPS check-in inside duty hours, an order to an invoice, a collection to the bank entry, a closed task to its attached proof. Three auditors report with evidence and never name a person at fault on inference, as his guardrail requires.

SPLIT

Chemicals and machinery, plant and field, one command centre

Was: In his words: he sells construction, waterproofing and industrial chemicals and also machinery, through dealers and field executives, and wants GREATISH and future companies run from a single AI CEO Command Center, with his absence not stopping the processes.

Now: Three spines, plant, field sales and accountability, each built multi-company and multi-warehouse, hand their findings to one daily note. Machinery job cards use the same Batch Record Skill with a serial number, so the second line of business runs on the same spine, not a second system.

Chosen because the owner has tried the common tools and found the manual coordination between them is the cost, and because he runs several lines of work that he wants seen from one screen. His own success test is the measure: every department, executive, unit and financial activity visible in one place, with a daily AI report so he need not ask anyone.

03 **RECOMMENDED AI SYSTEMS** SYSTEMS · FOUNDATION FIRST

F-00 P1

GREATISH Shared Record

ONE DATABASE, MULTI-COMPANY AND MULTI-WAREHOUSE FROM DAY ONE

↓

USER ROLES AND LOGIN PER PERSON

↓

APPROVAL MATRIX: WHO SIGNS WHAT

↓

EVERY ENTRY STAMPED COMPANY · WAREHOUSE · USER · TIME

↓

TALLY PRIME, EXCEL, SHEETS, WHATSAPP KEPT, SECOND TYPING REMOVED

WHY FIRST
every auditor, board and CEO report below can only be as truthful as this record; it is agreed in one sitting with Ajay before anything is built.

OPEN INPUT
the numbers sheet, people map and software list were left blank, so roles and the approval matrix are drawn from Ajay's own guardrail answers and must be confirmed.

SOLVES MANUAL MATCHING OF PURCHASE, SALES, STOCK, PRODUCTION AND ACCOUNTING RECORDS ACROSS TOOLS THAT DO NOT TALK TO EACH OTHER.

SYS-01 P1

GREATISH Beat App + Field Day Skill

EXECUTIVE LOGS IN, GPS ON ONLY INSIDE DUTY HOURS

↓

CHECK-IN NEAR SHOP PIN + SHOP PHOTO

↓

DEMAND, LEAD, QUOTATION, ORDER AGAINST APPROVED PRICE LIST

↓

COLLECTION ENTERED WITH RECEIPT PHOTO OR UTR

↓

END-OF-DAY REPORT DRAFTED FROM THE CHECK-INS THEMSELVES

GUARDRAIL
any non-list rate, credit beyond limit or sale on udhaar is saved as a request and goes nowhere until Ajay or the sales head approves inside the app; quotation rate line stays blank for a human.

ADOPTION
executives already send WhatsApp locations and photos; the app asks for the same things in one place, with the report written for them to confirm, not type.

SOLVES MANUAL TALLY OF SALES, SHOP VISITS, CUSTOMER ENQUIRIES AND ORDERS, AND NOT KNOWING WHO ONLY MARKS ATTENDANCE.

SYS-02 P2

GREATISH Field Verify Flow + Sales Command Board

EOD REPORT SUBMITTED, OR 7 PM PASSES

↓

CLAIMED VISIT MATCHED TO GPS CHECK-IN

↓

CLAIMED ORDER MATCHED TO SYSTEM ORDER AND INVOICE

↓

CLAIMED COLLECTION MATCHED TO RECEIPT AND BANK

↓

VERIFIED-VS-REPORTED SHEET PER EXECUTIVE TO THE BOARD AND MORNING REPORT

GUARDRAIL
mismatches go to the sales head for human verification with evidence; the flow never marks an employee wrong and never touches incentive.

WHY FIRST
this is the gap Ajay named, reported visits against verified visits, and it runs on the records S-01 already creates with no further change by anyone.

SOLVES CHECKING EACH EXECUTIVE'S ATTENDANCE, LOCATION AND PRODUCTIVITY HIMSELF AND PHONING TO ASK WHERE HE IS.

SYS-03 P2

GREATISH Store Gate + Batch Record Skill

GRN AGAINST OPEN PO WITH SUPPLIER LOT

↓

MATERIAL ISSUED TO A NAMED BATCH

↓

BATCH RECORD, QC REPORT, FG INWARD WITH BATCH AND EXPIRY DRAFTED

↓

DISPATCH OUTWARD AGAINST SALES ORDER

↓

LIVE STOCK BY WAREHOUSE AND BATCH, REORDER FLAGS, LABELS

GUARDRAIL
formulations, BOM and consumption norms are read-only to the system; any change, any stock adjustment beyond tolerance and any write-off waits for Ajay or the authorised head.

ADOPTION
the store keeper enters each movement once on a phone at the gate instead of a register, and the supervisor's short batch entry replaces the typed daily report.

SOLVES NOT KNOWING AT ANY TIME WHAT WAS MANUFACTURED, WHAT STOCK IS AVAILABLE AND WHAT RAW MATERIAL WAS CONSUMED.

SYS-04 P3

GREATISH Task Desk + Pending Work Board

TASK ENTERED ONCE: OWNER, DEADLINE, PRIORITY, APPROVER

↓

EACH PERSON SEES ONLY THEIR OWN LIST

↓

CLOSING ASKS FOR PROOF: PHOTO, FILE, REFERENCE, NOTE

↓

DEPARTMENT COLUMNS: OPEN, OVERDUE, WHO HOLDS IT

↓

EXPENSE STRIP AND AJAY'S APPROVAL QUEUE WITH PAPERS ATTACHED

ADOPTION
managers and staff must put work into the desk instead of WhatsApp and memory; the five-line SOP per department (who, when, who approves, how long, who is told) is loaded alongside.

GUARDRAIL
expense claims above the limit, salary changes and hiring recommendations sit in Ajay's queue; nothing on the board is typed by hand, so it cannot be dressed up for the owner.

SOLVES ASKING EMPLOYEES AGAIN AND AGAIN FOR WORK STATUS AND PENDING TASKS, AND IMPORTANT WORK RESTING ON VERBAL INSTRUCTIONS OR ONE PERSON'S MEMORY.

SYS-05 P3

GREATISH Escalation Chain

DEADLINE PASSES WITH NO CLOSING RECORD

↓

REMINDER TO THE RESPONSIBLE EMPLOYEE WITH THE SOP LINE

↓

STILL OPEN: MANAGER NOTIFIED, TASK MARKED LATE ON THE BOARD

↓

STILL OPEN: WRITTEN INTO THE DUTY OFFICER'S NEXT REPORT

↓

ANYTHING TOUCHING MONEY, SALARY, HIRING OR EXIT STOPS IN AJAY'S QUEUE

GUARDRAIL
the chain can only prepare papers; vendor payments, salary changes and employee hiring or exit wait for Ajay's sign-off.

WHY FIRST
it runs on Task Desk data with no new entry from anyone and removes Ajay personally following up every late job.

SOLVES PERSONALLY CHASING EMPLOYEES IN EVERY DEPARTMENT AND FOLLOWING UP ON EVERY JOB HIMSELF.

SYS-06 P3

GREATISH Plant Board

PRODUCED TODAY, THIS WEEK, THIS MONTH VS PLAN

↓

BATCH ACTUAL COST VS BOM COST, CONSUMPTION VARIANCE, WASTAGE

↓

REORDER ITEMS, BATCHES NEARING EXPIRY, STOCK VALUE BY WAREHOUSE

↓

OPEN POS, GRNS WITHOUT BILL, BILLS WITHOUT GRN, SUPPLIER OUTSTANDING

↓

GSTR-1, GSTR-3B, TDS, E-INVOICE AND E-WAY BILL DATES WITH STATUS; TALLY SYNC STATUS

OPEN INPUT

the board only shows what Store Gate and the Batch Record Skill have recorded, so it is drawn after S-03 has run for a few weeks; standard BOM costs must be supplied by Ajay.

GUARDRAIL

every tile clicks down to the voucher; the board shows, it does not post or pay.

SOLVES COMPILING THE PLANT PICTURE BY ASKING THE PRODUCTION HEAD, STORE KEEPER, PURCHASE PERSON AND ACCOUNTANT SEPARATELY.

SYS-07 P4

GREATISH Purchase to Tally Flow

REORDER LEVEL HIT OR GRN POSTED

↓

REQUISITION DRAFTED WITH STOCK, CONSUMPTION, RATE HISTORY, APPROVED SUPPLIERS

↓

WAITS FOR AJAY OR THE PURCHASE APPROVER

↓

PO SENT TO SUPPLIER ON WHATSAPP OR EMAIL IN GREATISH FORMAT

↓

PO · GRN · BILL MATCHED; MATCHED ENTRIES POST TO TALLY, MISMATCHES HELD IN A QUEUE

GUARDRAIL

no PO leaves before a human signs the requisition; supplier payment is never released by this flow, it only shows what is due and when.

OPEN INPUT

needs clean supplier ledgers and approved supplier lists per material before posting to Tally Prime.

SOLVES ENTERING THE SAME PURCHASE IN EXCEL, A REGISTER AND TALLY, AND FINDING RATE OR QUANTITY DIFFERENCES MONTHS LATER.

SYS-08 P4

GREATISH Plant Auditor + Sales Auditor (shadow mode)

NIGHTLY AFTER DAY CLOSE; EVENING AFTER FIELD VERIFY

↓

RECONCILE PRODUCTION, STOCK, PURCHASE, SALES, DISPATCH AND TALLY

↓

COMPUTE PRODUCTIVITY, CONVERSION AND RANKING PER EXECUTIVE FROM VERIFIED FIGURES

↓

FLAG PATTERNS: ATTENDANCE WITH NO VISITS, ORDERS NEVER INVOICED, COLLECTIONS NOT IN BANK, REPEATED WASTAGE

↓

ALERT WITH LINKED RECORDS, RISK LEVEL, RECOMMENDED ACTION; OWN TAMPER-PROOF LOG

GUARDRAIL

runs in shadow mode first, reporting to Ajay but changing nothing; never names an employee at fault on inference alone and never hides a mistake; incentive and commission statements are drafts until Ajay signs them before payroll.

ADOPTION

Ajay judges the alerts for a few weeks before trusting them; the Duty Officer and the consolidated daily report follow in months four to six.

SOLVES MANUAL RECONCILIATION OF RECORDS ACROSS DEPARTMENTS, CALCULATING SALARY, INCENTIVE AND COMMISSION HIMSELF, AND NOT KNOWING WHO ACTUALLY GENERATES CUSTOMERS, ORDERS AND PAYMENTS.

Tally Prime, Microsoft Excel, Google Sheets, WhatsApp and email stay where they are useful; the new GREATISH system sits around them on one shared record and removes the second typing. No ERP is bought: this is a custom build on Ajay's own chip, kept multi-company and multi-warehouse so a second unit or company plugs in later. The software list (paid and used, wants to stop paying for, paid and never opened) was not answered, so nothing is proposed for removal; that is Ajay's to fill. The HR Letter and SOP Skill, the Duty Officer, dealer bakaya reminders, machinery service and the CEO assistant are in the twelve-month plan, not these twelve weeks.

BUSINESS

We manufacture and sell construction chemicals, waterproofing chemicals, industrial chemicals, and machinery. Our products are supplied to builders, contractors, construction companies, infrastructure developers, industrial units, dealers,

04 IMPLEMENTATION ROADMAP GANTT · THREE MONTHS

PHASE	P1 SHARED RECORD AND THE FIELD SPINE		P2 VERIFY THE FIELD, RECORD THE PLANT		P3 WORK ON RECORD, CHASED BY THE SYSTEM		P4 TALLY CONNECTED, AUDITORS WATCHING	
SYSTEM	WK 1–2	WK 3–4	WK 5–6		WK 7–8	WK 9–10		WK 11–12
F-00 GREATISH Shared Record	Shared record + approval matrix							
SYS-01 GREATISH Beat App + Field Day Skill	Beat App on every phone							
SYS-02 GREATISH Field Verify Flow + Sales Command Board			Verified vs reported, daily					
SYS-03 GREATISH Store Gate + Batch Record Skill			Every movement stamped to a batch					
SYS-04 GREATISH Task Desk + Pending Work Board					Every task has an owner and a deadline			
SYS-05 GREATISH Escalation Chain					Remind → escalate → queue			
SYS-06 GREATISH Plant Board					Real batch cost, stock, compliance dates			
SYS-07 GREATISH Purchase to Tally Flow							One typing, PO to voucher	
SYS-08 GREATISH Plant Auditor + Sales Auditor (shadow mode)							Independent checkers, reporting only	

P1 DONE WHEN

The architecture, roles and approval matrix are signed off in one sitting, and every field executive has his own login on the Beat App with every claimed shop visit existing as a GPS check-in row inside duty hours.

P2 DONE WHEN

A verified-versus-reported sheet per executive reaches Ajay's phone each morning without a call, and every material movement at the plant exists as a Store Gate entry stamped to a batch and a warehouse.

P3 DONE WHEN

Every department's open and overdue tasks show on the Pending Work Board with a named holder, late items have been reminded and escalated without Ajay phoning anyone, and the Plant Board shows real batch cost against BOM for the batches made that week.

P4 DONE WHEN

The real state of field sales, plant, stores, purchase and pending work is visible in one place, matched purchases post to Tally without a second typing, and a daily AI report with the auditors' exceptions arrives on Ajay's phone, so he does not have to ask employees for information or chase any task himself, on one to two hours a week.

BUSINESS

We manufacture and sell construction chemicals, waterproofing chemicals, industrial chemicals, and machinery. Our products are supplied to builders, contractors, construction companies, infrastructure developers, industrial units, dealers,

SYS-06 GREATISH Plant Board	NOTHING HERE
SYS-07 GREATISH Purchase to Tally Flow	
SYS-08 GREATISH Plant Auditor + Sales Auditor (shadow mode)	

← LOW DEPENDENCE ON HUMAN CHANGE HIGH →

Field sales is built first because Ajay marked it highest priority and the Beat App creates the verified records every other field layer depends on; it is the one behaviour change asked of anyone in Phase 1, and after it nothing else requires an executive to change how he works. Runs-alone pieces (Field Verify, Escalation Chain) switch on top of data the earlier pieces already produce. Compounding pieces (Plant Board, Purchase to Tally, the two auditors) come last because they are only as truthful as the records underneath them, and the auditors run in shadow mode first. Nothing is scheduled to need Ajay in July, September or December; his load is held at one to two hours a week for reports and approvals.

GREATISH Beat App

For problem 2: Field sales, verified against the records, not the report

Field sales is the function you marked highest priority, and the Beat App is the one build that creates the verified records every other field layer depends on: GPS check-ins, shop visits, orders against the list price, and collections with a receipt photo. It is medium difficulty, high confidence, carries a conservative fifteen thousand rupees and thirty hours a month on its own, and once it is live the Field Verify Flow, the Sales Command Board and the Sales Auditor can be switched on in sequence without any executive changing how he works again.

PROBLEM 1 OF 3

GREATISH Plant Operating Core: production, stock, purchase and Tally on one spine

> *"मुझे किसी भी समय पता होना चाहिए कि कौन-सा Product कितना Manufactured हुआ, कितना Stock उपलब्ध है, कितना Raw Material Consume हुआ और वास्तविक Manufacturing Cost कितनी आई। सभी Modules आपस में Integrated हों ताकि एक Department में किया गया काम संबंधित दूसरे Departments में भी Automatically Update हो।"*

9 AM TOMORROW At 9 AM tomorrow Ajay opens the GREATISH Plant Board on his phone and sees yesterday's batches, what each one actually cost against its BOM, which raw and packing materials touched reorder level, and the Plant Auditor's overnight note on the places where purchase, production, stock and Tally did not agree, without a single call to the plant.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

GREATISH Batch Record Skill

Encodes how a GREATISH chemical batch and a machinery job are supposed to be made and documented, and drafts every production paper from it.

- Holds the approved product formulation list, BOM per product and pack size, standard consumption norms, QC test parameters and acceptance limits, batch numbering rule, manufacturing date and expiry rule, and the machinery job card format with serial number.
- From a supervisor's short entry of product, planned quantity, raw material lots issued and lab readings, it drafts the batch manufacturing record, the material issue slip, the QC test report, the finished goods inward note with batch and expiry, and the daily production report in the same format every day.
- Formulations stay locked. The skill reads the master but cannot change it, so the confidential chemical formula is protected the way Ajay set in his guardrails.
- Written as the knowledge layer of the custom GREATISH system, so the same rules feed the microapp, the board and the auditor below rather than living in a supervisor's memory or a loose Excel.

REPLACES

Batch records kept in registers and Excel, production reports typed differently by each supervisor, and consumption norms that exist only in someone's head.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

20 hours a month

> OWNER APPROVES Any change to a product formulation, BOM or consumption norm is approved by Ajay before the skill starts drafting with it.

2. MICRO-APP

AS YOU IMAGINED

GREATISH Store Gate

One small tool at every material movement: inward against PO, issue to batch, finished goods inward, dispatch against sales order, each movement stamped to a batch and a warehouse.

- Inputs: GRN against an open purchase order with supplier lot number and received quantity, material issue to a named batch number, finished goods inward with batch, manufacturing date and expiry, dispatch outward against a sales order, and physical count entries during stock verification.
- Outputs: live stock by warehouse and by batch for raw material, packing material, semi-finished and finished goods, printed barcode or QR labels for each batch, reorder level flags, a three-way match status of PO, GRN and supplier bill, and a damaged or expired stock list.
- Every movement carries company, warehouse, user and time, which is the audit trail Ajay asked for and the foundation that lets a second warehouse or a second company be added later without rebuilding.
- Works on a phone at the store gate and on a desktop in the office, so the store keeper does not need a separate register.

REPLACES

Stock sheets in Excel and Google Sheets, WhatsApp photos of challans, and phone calls to the store to ask what is actually available.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

₹15,000 a month · 30 hours a month

> OWNER APPROVES Any stock adjustment beyond the agreed tolerance, and any write-off of damaged or expired stock, is approved by Ajay or the authorised head before the stock figure changes.

3. DASHBOARD

GREATISH Plant Board

Shows the plant side of GREATISH as it actually stands: produced versus planned, real batch cost against BOM cost, consumption variance, stock health, unmatched purchase papers and compliance dates.

- Product-wise quantity manufactured today, this week and this month, against the production plan.
- Batch-wise actual manufacturing cost against the standard BOM cost, with raw material consumption variance, wastage and rejection shown per batch, which is the real manufacturing cost Ajay says he cannot see today.
- Stock panel: items at or below reorder level, batches nearing expiry, stock value by warehouse, and stock adjustments awaiting approval.
- Purchase panel: open purchase orders, GRNs received without a supplier bill, bills received without a GRN, supplier outstanding, and purchase rate history by material.
- Compliance strip: upcoming GSTR-1, GSTR-3B, TDS and e-invoice and e-way bill dates with status, so no statutory due date slips, with the figure for every tile clickable down to the voucher.
- Tally Prime sync status, showing what has posted and what is held back for mismatch.

REPLACES

Ajay compiling a picture by asking the production head, the store keeper, the purchase person and the accountant separately, and then doing the matching himself.

DIFFICULTY

Medium

CONFIDENCE

Medium

CONSERVATIVE SAVING

15 hours a month

4. AUTOMATION

GREATISH Purchase to Tally Flow

From reorder trigger to posted purchase voucher without a second typing, with the purchase order held until a human signs it.

- Trigger: a raw or packing material in Store Gate falls to its reorder level, or a GRN is posted against an open purchase order.
- Step one: a purchase requisition is drafted with current stock, recent consumption, the recent purchase rates from the rate history, and the approved suppliers for that material.
- Step two: the requisition waits for Ajay or the authorised purchase approver. Nothing is sent to any supplier before this.
- Step three: on approval the purchase order goes to the supplier on WhatsApp or email in the GREATISH format, and the GRN at the gate is matched to the PO and later to the supplier bill.
- Step four: fully matched purchase entries post to Tally Prime as purchase vouchers with the supplier ledger updated; any quantity, rate or GST mismatch is held in a queue with the three documents side by side for a person to resolve.
- Supplier payment is never released by this flow. It only shows what is due and when.

REPLACES

Entering the same purchase once in Excel, once in a register and once in Tally, and discovering rate or quantity differences months later.

DIFFICULTY

Medium

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹10,000 a month · 25 hours a month

> OWNER APPROVES The purchase order is released only after Ajay or the authorised approver signs the requisition, and every supplier payment is approved and made by a person outside this system.

5. AI AGENT

SCOPING CALL

GREATISH Plant Auditor

The independent checker Ajay described for production, inventory and purchase. It trusts no single department's entry and reconciles records across them every night, then reports with evidence.

- Trigger: runs after day close every night, and immediately on any stock adjustment, any GRN without a PO, or any batch whose consumption crosses the BOM norm.
- What it does: matches production reports to material issued and finished goods received, reconciles inventory to purchase, production, sales and dispatch records, matches purchase orders to GRNs and supplier bills, compares batch cost to standard, and looks for duplicate entries, unusual quantities, repeated wastage and changes made outside authorised roles.
- Each alert carries the linked records, the mismatch amount or quantity, a risk level and a recommended action. It never names an employee as at fault on inference alone; it marks the case for human verification, exactly as the guardrails say.
- Reports: a short morning note to Ajay on WhatsApp with the exceptions that need him, a fuller list to the production head and store keeper for the routine ones, and a structured summary handed to the central daily report so the plant side appears alongside the rest of the company.
- Keeps its own log of every check and every alert, which cannot be edited or deleted by the people it is checking.

REPLACES

Manual reconciliation of purchase, sales, stock, production and accounting records, the item Ajay listed first under never again.

DIFFICULTY

Hard

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹20,000 a month · 20 hours a month

> OWNER APPROVES Any corrective entry the auditor proposes, including a stock correction or reversing a voucher in Tally, is posted only after Ajay or the authorised head approves it.

PROBLEM 2 OF 3

Field sales, verified against the records, not the report

> *"मुझे यह भी पता होना चाहिए कि कौन-सा कर्मचारी केवल Attendance लगा रहा है और कौन वास्तव में कंपनी के लिए नए Customers, Orders, Sales और Payments Generate कर रहा है।"*

9 AM TOMORROW At 9 AM tomorrow every executive has checked in on the GREATISH Beat App, the GREATISH Sales Command Board shows who is on which beat, and the morning Sales Executive Report is already on Ajay's phone with yesterday's verified visits, orders and recovery, so nobody has to be phoned.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

GREATISH Field Day Skill

Encodes the GREATISH rule for what counts as a real shop visit, what a day on the beat must contain, and how the end-of-day report is written, so every executive in every city reports the same way.

- The SOP it holds: a visit counts only with a GPS check-in near the shop pin, a shop board photo, the products discussed, the demand noted and an outcome chosen from a fixed list.
- GPS runs only inside authorised field duty hours, exactly as Ajay set it, and the skill writes that rule into the app and into the report.
- Drafts a daily beat plan per executive from his territory, his pending follow-ups and the dealers not visited for a while.
- Drafts the end-of-day report from the check-ins themselves, so the executive confirms rather than types.
- Drafts new dealer registration text, customer follow-up messages and the cover note of a quotation; the rate line is left blank for a human.

REPLACES

Explaining the reporting method again and again, and reading free-text WhatsApp reports that each executive writes differently.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

10 hours a month

> **OWNER APPROVES** Any quotation drafted by this skill leaves the company only after Ajay or the sales head fills in and confirms the rate and the credit terms.

2. MICRO-APP

AS YOU IMAGINED

GREATISH Beat App

A mobile app with an individual login for each sales executive, built for shop-to-shop work in construction chemicals and waterproofing, from check-in at the shop to the receipt photo at collection.

- Inputs: GPS field attendance, shop check-in and check-out, shop photo, new shop or dealer registration with location pin, product-wise demand, lead and quotation entry, order booking against the approved price list, collection entry with receipt photo or UTR.
- Outputs: daily visit count, the list of shops visited with details, pipeline stage per customer, target vs achievement for the day, week and month, and the bakaya list of his own customers.
- Order booking is locked to the approved price list; a rate outside it, or credit beyond the customer's limit, is saved as a request and goes nowhere until approved.
- Collections show as claimed until accounts matches them with the bank; only then do they count as recovery.
- Scales to the 50 to 100 or more executives Ajay expects, one login each, territory assigned by the sales head.

REPLACES

WhatsApp location photos, Excel visit sheets and the phone calls asking an executive where he is and what he sold.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

₹15,000 a month · 30 hours a month

> OWNER APPROVES Every order at a non-list rate, every credit sale beyond limit and every special permission to sell on udhaar waits for Ajay or the sales head to approve inside the app before it becomes an order.

3. DASHBOARD

GREATISH Sales Command Board

One screen with the whole field team, and one click on any name for that executive's full working: where he went, what he visited, what he booked, what he recovered, and how much bakaya sits in the market through him.

- Team view: today's location during duty hours, shops visited, new shops added, customers spoken to, leads, quotations, confirmed orders, sales, target achieved, payment recovered, bakaya through him, conversion ratio.
- Individual view on click: location history for authorised field duty only, shop visit reports, pipeline, confirmed orders, target vs achievement, incentive earned so far, recovery.
- Area-wise and territory-wise sales, and dealer acquisition by area, from the same entries.
- Ranking, comparison and performance scorecard generated automatically from verified figures, not from the executive's own report.
- What becomes visible that is invisible today: the gap between reported visits and verified visits, and which executives are attendance-only.

REPLACES

Compiling each person's report by hand and keeping the comparison of executives in the owner's head.

DIFFICULTY

Medium

CONFIDENCE

Medium

CONSERVATIVE SAVING

20 hours a month

> OWNER APPROVES The owner approves anything that touches price, discount or terms before it goes out.

4. AUTOMATION

GREATISH Field Verify Flow

Runs when an executive submits his end-of-day report and checks every claim against a record that the executive did not write.

- Trigger: end-of-day report submitted, or 7 PM if it is not.
- Step one: each claimed visit is matched to a GPS check-in near that shop's pin inside duty hours.
- Step two: each claimed order is matched to an order in the system and to the invoice raised against it.
- Step three: each claimed collection is matched to the receipt in accounts and the bank entry.
- Step four: a verified-versus-reported sheet is built per executive, mismatches are attached with the evidence, and the sheet feeds the morning and evening Sales Executive Report.

REPLACES

Checking an executive's attendance, location and productivity yourself, and the manual tally of sales, shop visits, enquiries and orders.

DIFFICULTY

Medium

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹20,000 a month · 25 hours a month

> OWNER APPROVES A mismatch is sent to the sales head for human verification with its evidence; Ajay sees it in the morning report and decides. The flow itself never marks an employee wrong and never touches incentive.

5. AI AGENT

SCOPING CALL

GREATISH Sales Auditor

The independent AI sales auditor Ajay described: an AI employee that reads the verified sheets every evening, measures each executive on real records, ranks the team and reports with evidence, without declaring anyone guilty.

- Trigger: every evening after the GREATISH Field Verify Flow, and Monday morning for the week.
- What it does: computes productivity and conversion ratio per executive, builds the ranking, and looks for patterns such as attendance with no shop visits, repeated visits to the same shop with no order, orders booked but never invoiced, and collections claimed but not in the bank.
- Reads product-wise demand entries by area and suggests where a new dealer could be appointed and which product is moving.
- Drafts the monthly incentive and commission statement from verified sales and verified recovery only.
- Reports to Ajay: a morning and evening Sales Executive Report, the weekly ranking, and flagged cases with evidence, risk level and recommended action. Reports to the sales head: the same flags for human verification before any word reaches the executive.

REPLACES

Being the one who notices who is working and who is only marking attendance, and calculating incentive and commission yourself.

DIFFICULTY

Hard

CONFIDENCE

CONSERVATIVE SAVING

₹25,000 a month · 20 hours a month

> OWNER APPROVES Incentive and commission statements are drafts until Ajay signs them before payroll. Any warning, target change or action on an executive needs the sales head's verification and Ajay's approval.

PROBLEM 3 OF 3

Running GREATISH without Ajay chasing every task

> *“कर्मचारियों को बार-बार काम समझाना, Follow-up करना, उनकी Reports चेक करना, Pending Tasks पूछना, Payments और Expenses की जानकारी लेना... मुझे ऐसी व्यवस्था चाहिए जिसमें कोई भी महत्वपूर्ण काम केवल मौखिक निर्देशों या किसी कर्मचारी की व्यक्तिगत याददाश्त पर निर्भर न रहे।”*

9 AM TOMORROW At 9 AM the GREATISH Duty Officer note is on Ajay's phone: what each department closed yesterday, what is still pending and in whose name, which expense entries have no bill behind them, and the short list waiting for his approval, and he has not had to phone anyone to find this out.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

GREATISH HR Letter and SOP Skill

Encodes the approved GREATISH formats for every HR document and the department SOPs so that letters and work instructions are drafted from a form, not typed from memory.

- Holds the approved templates: offer letter, appointment letter, joining letter, employment agreement, job description, roles and responsibilities, confirmation, increment, warning, resignation acceptance, relieving letter and experience certificate.
- When basic details, designation, department, joining date and the approved salary structure are entered, it drafts the full set in one go, in the company's wording, ready for signature.
- Holds each department SOP in the five-line form Ajay asked for: who does it, when, who approves, how long it should take, and who is told if it is not done.
- Drafts a written work instruction from a one-line verbal order, so the order exists on record before the employee starts.
- Knows what it must never draft on its own: a hiring decision, a salary figure, a termination. It only fills what an authorised person has already approved.

REPLACES

HR letters typed afresh each time, and instructions given by mouth that live in one employee's memory.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

₹5,000 a month · 10 hours a month

OWNER APPROVES Every letter that carries a salary, incentive, hiring, increment or exit decision is signed by Ajay or the authorised person before it is issued.

2. MICRO-APP

GREATISH Task Desk

A small tool where every piece of work is entered once with a responsible person, a deadline, a priority and an approval authority, and leaves a digital record when it is closed.

- Inputs: the task, the department, the responsible employee, the deadline, the priority, and who must approve the result if approval is needed.
- Each employee and manager logs in and sees only their own list: what is due today, what is overdue, what is waiting on someone else.
- Closing a task asks for proof: a photo, a file, a reference number or a short note, so the completion is a record and not a claim.
- Managers can reassign and comment; every change is stamped with who did it and when, which becomes the audit trail Ajay asked for.
- Outputs: a department-wise pending list, a per-employee completion history, and a feed into the Pending Work Board and the escalation chain below.

REPLACES

Asking employees for the status of work again and again, and work that lives in WhatsApp chats and personal memory.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

20 hours a month

3. DASHBOARD

GREATISH Pending Work Board

One screen, department by department, showing what is pending, what is overdue, who holds it, and what is waiting on Ajay, so the real state of the company is visible without a single phone call.

- Columns for sales office, purchase, production, stores, accounts, HR and dispatch; each column shows open tasks, overdue tasks, and the person holding each one.
- A separate strip for expenses: entries recorded this week, which ones have a bill attached, which have an approval, and which have neither.
- An approval queue in Ajay's name: expense claims above the limit, salary changes, hiring recommendations, each with the papers attached.
- Click on any employee name and the board opens their completion history, their late items and their pending approvals.
- Nothing on this board is typed by hand; it is drawn from the Task Desk, the attendance record and the expense entries, so it cannot be dressed up for the owner.

REPLACES

Walking from department to department, or calling each manager, to learn what is pending and where money is being spent.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

15 hours a month

4. AUTOMATION

GREATISH Escalation Chain

When a deadline passes with no completion record, the system reminds, then escalates, then places the matter in front of the right person, without Ajay lifting the phone.

- Trigger: a task in the Task Desk crosses its deadline without a closing record, or an expense entry sits without a bill or approval beyond the set window.
- Step one: the responsible employee gets a reminder on the app with the task and the SOP line that applies.
- Step two: if still open after the time set in the SOP, the department manager is notified and the task is marked late on the Pending Work Board.
- Step three: if the manager does not act within their window, the item is written into the Duty Officer's next report with the full history.
- Step four: anything in the chain that touches money, salary, hiring or an exit stops and waits in Ajay's approval queue; the automation never settles it.

REPLACES

Ajay personally following up every late job and chasing every department for pending work.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

12 hours a month

> OWNER APPROVES Any escalated item involving an expense above the authority matrix limit, a vendor payment, a salary change or an employee's hiring or exit waits for Ajay's sign-off in the queue; the chain can only prepare the papers.

5. AI AGENT | AS YOU IMAGINED | SCOPING CALL

GREATISH Duty Officer

A named AI employee that reads the Task Desk, attendance, expense entries and HR records every morning and evening, checks reports against records, and sends Ajay a plain management note with reasons and suggestions, never a verdict.

- Trigger: twice a day on schedule, and whenever the escalation chain hands it a matter that reached step three.
- Compares what employees reported with what the records show: task closures against proof attached, attendance against task activity, expense entries against bills and approvals, HR letters issued against approvals on file.
- Writes the daily note: what was done, what stayed pending and with whom, where a mismatch or unusual expense was found, and which items need Ajay's approval, each with the evidence and a suggested next step.
- Weekly it drafts the department scorecard and the employee productivity summary from actual records, and monthly it prepares the appraisal inputs HR needs.
- Reports to Ajay first and to department heads for their own sections. It flags a doubtful case for human verification and never names anyone at fault on its own reading.
- It feeds its findings upward to the central monitoring that the other problems carry, so there is one consolidated picture and not a second one.

REPLACES

Ajay preparing daily, weekly and monthly reports himself and checking each employee's work and spending personally.

DIFFICULTY

Hard

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹15,000 a month · 25 hours a month

> OWNER APPROVES Any action the Duty Officer recommends on a person, a payment, a salary or an expense is a proposal only; Ajay or the authorised person approves it in the queue before anything happens.

ACROSS THE WHOLE BUSINESS

DEPARTMENT	TODAY	WITH THESE SYSTEMS
Field sales and market development	Executives report by WhatsApp and phone, visits and orders are tallied by hand, and you cannot tell from the office who is working and who is only marking attendance.	Every executive works from the GREATISH Beat App; visits, orders and collections are verified against GPS, invoices and the bank; the Sales Command Board ranks the team on real records and the Sales Auditor sends you a morning and evening report.
Sales office, dealers and distributors	Quotations, order confirmation, dispatch and dealer follow-up are tracked across Excel, email and memory, and dealer-wise bakaya is known only when someone is asked.	Quotation cover notes are drafted by the Field Day Skill with the rate left for a human, orders flow against the approved price list, dealer profiles carry purchase history and bakaya, and non-list rates or credit beyond limit wait in an approval queue.
Production and quality control	Batch records sit in registers, each supervisor writes the daily report differently, and the real manufacturing cost of a batch is not visible to you.	The Batch Record Skill drafts the batch manufacturing record, QC report and daily production report in one format, the Plant Board shows actual cost against BOM per batch, and formulations stay locked behind your approval.
Stores, warehouse and purchase	Stock is kept in sheets and WhatsApp photos, reorder is noticed late, and PO, GRN and supplier bill are matched by hand or not at all.	Store Gate stamps every movement to a batch and a warehouse, reorder flags raise a requisition that waits for your signature, and matched purchases post to Tally Prime without a second typing.
Accounts, GST and compliance	Transactions are entered into Tally after the fact, collections are reconciled with the bank by hand, and statutory dates depend on someone remembering them.	Purchase and collection entries arrive in Tally already matched, the compliance strip on the Plant Board shows every GSTR, TDS, e-invoice and e-way bill date with status, and the Plant Auditor flags duplicate or unusual entries with evidence.
Human resources and payroll	Offer, appointment and relieving letters are typed afresh, attendance and incentive are calculated by	The HR Letter and SOP Skill drafts the full letter set from one form, incentive and commission statements come from verified sales and recovery, and every letter

DEPARTMENT	TODAY	WITH THESE SYSTEMS
	you, and an employee's documents are scattered.	carrying a money or hiring decision waits for your signature.
Management and owner's office	You walk the departments, call managers, ask for pending work and compile your own daily, weekly and monthly reports.	The Task Desk records every job with an owner and deadline, the Escalation Chain chases it, the Pending Work Board shows the real state, and the Duty Officer sends you a plain note twice a day with what needs your approval.
Machinery manufacturing and after-sales service	Machine serial numbers, installation, warranty and service calls are tracked separately from the chemical business, mostly on paper and phone.	Machinery job cards use the same Batch Record Skill with a serial number, and the customer-wise machine record, warranty and service assignment are added to the same spine in the twelve month plan.

STAYS HUMAN

- Pricing and negotiation
- Bank payments, supplier payments, credit limits and any change to a chemical formulation
- Hiring, salary, incentive and exit decisions for any employee

FIRST 90 DAYS

01 Weeks one to three: agree the system architecture, database, user roles and approval matrix in one sitting with you, then build the GREATISH Beat App and the Field Day Skill and put them on every executive's phone with individual logins and GPS limited to duty hours.

02 Weeks four to six: switch on the Field Verify Flow and the Sales Command Board so the first verified-versus-reported sheets reach you each morning, and start Store Gate at the

12 MONTHS

01 Months four to six: the Duty Officer goes live and the three auditors begin handing their findings to one consolidated daily, weekly and monthly report, the first form of the central master AI you described.

02 Months six to eight: dealer and customer profiles, credit limit monitoring and bakaya reminders by WhatsApp are added on the sales spine, with every reminder in an approved wording and no discount or terms offered by the system.

plant gate alongside the Batch Record Skill.

03 Weeks seven to nine: open the Task Desk and the Pending Work Board for every department and load the SOPs in the five-line form; the Escalation Chain starts reminding and escalating without you.

04 Weeks ten to thirteen: connect the Purchase to Tally Flow and let the Plant Auditor and Sales Auditor run in shadow mode, reporting to you but changing nothing, so you can judge their alerts before trusting them.

05 Throughout: you give one to two hours a week for approvals and reading reports; nothing is scheduled to need you in July, September or December.

03 Months eight to ten: the HR module is completed around the HR Letter and SOP Skill, with attendance, leave, payroll inputs and PF and ESI records in one place and every pay change behind your approval.

04 Months ten to twelve: the machinery service module, tender tracking and the document knowledge base are added, and the CEO assistant is switched on so you can ask plain questions of the records the system has now been collecting for a year.

05 All through the year the architecture is kept multi-company and multi-warehouse so the next unit or company you start joins the same command centre without a rebuild.

Added up conservatively from the layers above, these systems return around ₹1.25 lakh a month and close to three hundred hours a month of work that today falls on you and your managers, before

a single rupee of growth from a sales team that is finally measured on what it actually did.
