ARCHI DESIGN
AI SYSTEMS BLUEPRINT · REV B

A seven-person architecture and interior studio, now also taking turnkey civil, renovation, commercial and factory work. Every task, follow-up and status check runs through the owner. One lean studio OS: a foundation and nine systems in four phases, My Day and attendance first, the design-site chain next, scorecards and turnkey controls after.

PREPARED FOR
MAHESH R. KHANDAGALE, OWNER
BLUEPRINT AUDIT 11.11.2026
LEAN MASTER PLAN V1.4, NOV 2026
REV B SUPERSEDES REV A

01 THE NUMBERS
DASHBOARD TILES · AS PROVIDED BY CLIENT

8	3	4	2	1000000	15 Days	60%	7
LEADS A MONTH	QUOTES A MONTH	ORDERS OUT OF 100 QUOTES	ORDERS A MONTH	AVERAGE ORDER VALUE	SALES CYCLE	REPEAT CUSTOMERS	TOTAL HEADCOUNT (MASTER PLAN DESCRIBES SIX DEPARTMENTS)

Two projects a month at ₹10,00,000, 60% from returning clients: **the studio wins work; what it cannot do is run it without the owner**. *Two figures disagree (2 of 3 quotes against 4 of 100) and the headcount of 7 sits beside a master plan built for departments; section 05 lists both to settle.*

02 THE PROJECT PATH TODAY
FLOWCHART · ENQUIRY TO AFTER HANDOVER (MASTER PLAN §3)

01	02	03	04	05	06	07	08	09

MANAGEMENT
NOT ANSWERED · MASTER PLAN: L1 TO L2 HEADS, LEADS, CAPTAINS

DESIGNERS AND SITE ENGINEERS
OFFICE AND SITE · ESSL MACHINE MISSES SITE DAYS

"EMPLOYEES DON'T TAKE OWNERSHIP."

REV B NAMES THE MIDDLE: LINE MANAGER, PROJECT CAPTAIN, DEPARTMENT HEAD.

05 WHAT THE MASTER PLAN ADDS
BEFORE / AFTER · WHY REV B EXISTS

REV A
A 90-day interior studio plan
Was: eight systems for a seven-person design practice; managers, attendance, turnkey work and HR not on file.
Now: the Lean Master Plan v1.4 adds attendance with the eSSL machine, turnkey projects of five types, departments and approvals, and the Scaling Up rhythm.

THE HABIT
Tasks by voice, status by phone
Was: "I have take personally follow up each and every day by giving them daily tasks."
Now: My Day with priority numbers 1 to 5, a clash button, an escalation ladder, and an Exception View that says "All clear".

THE MEASURE
No fair way to judge work
Was: "I cannot able to measure my employee's work in standard format."
Now: four metrics per role, calculated from records, two months in shadow before any rupee is paid.

The master plan's own rule decides the order: **software cannot create ownership on its own**, *so the daily list and fair attendance come before any board, score or AI helper.*

07 IMPLEMENTATION ROADMAP

GANTT · 4 PHASES · TWELVE MONTHS

PHASE	P1 · OWNERSHIP CORE			P2 · DESIGN-SITE CHAIN		P3 · SCORE, CLIENT, TURNKEY	P4 · MONEY, PEOPLE, HANDOVER
SYSTEM	WK 1-2	WK 3-4	WK 5-6	WK 7-8	WK 9-12	MONTHS 4-6	MONTHS 7-12
F-00 Studio Record	Org, roles, limits						
SYS-01 Studio Ways	SOPs, templates, Studio Plan						
SYS-02 My Day		Numbered list, first live Monday					
SYS-03 Attendance		eSSL + phone punch					
SYS-04 Leads				Pipeline, proposals			
SYS-05 Drawing-Site Chain				Release gate, site diary			
SYS-06 Exception View					Owner view, Rocks		
SYS-07 Scorecards						Shadow mode	Incentives live
SYS-08 Client Page						Ratings, health	
SYS-09 Turnkey Controls						Tier 2, then Tier 3; billing, cash view	

P1 DONE WHEN

All 7 open a numbered My Day each morning · every closed task carries proof · no task given by voice since the first live Monday · every day's attendance, office or site, is in one record with the late-mark counter visible.

P2 DONE WHEN

Every enquiry has an owner and a next action · every live site has a dated report with photos each working day · every drawing on site carries Released for Site · the owner opens one Exception View at 9 AM.

P3 DONE WHEN

Two months of shadow scorecards accepted as fair · every client rating below 8 called within 24 hours · every Tier 2 and 3 project shows budget, committed and actual.

P4 DONE WHEN

The owner spends under 30 minutes a day on follow-ups with one 30-minute weekly review · incentives paid from signed scorecards · payroll attendance ready within a day of month-end.

08 WHY THIS BUILD ORDER

2×2 MATRIX

HIGH IMPACT · RUNS ON WHAT EXISTS TODAY

- F-00 Studio Record and Organisation
- SYS-03 Attendance and Leave
- SYS-04 Leads and Proposals

→ BUILD FIRST; THE ESSL MACHINE AND ENQUIRIES ALREADY EXIST

HIGH IMPACT · NEEDS PEOPLE TO CHANGE

- SYS-01 Studio Ways
- SYS-02 My Day and Escalation
- SYS-05 Drawing and Site Chain

→ BUILD FIRST TOO: THIS IS THE HABIT THE OWNER ASKED TO CHANGE

COMPOUNDING · NEEDS CLEAN DATA

- SYS-06 Owner Exception View
- SYS-07 Scorecards and Incentives
- SYS-08 Client Page and Pulse

→ AFTER WEEKS OF MY DAY AND SITE RECORDS

GROWTH · UNBLOCKS SCALING

- SYS-09 Turnkey Controls, by tier

→ BROUGHT FORWARD IF A LARGE TURNKEY PROJECT IS ALREADY RUNNING

← LOW DEPENDENCE ON HUMAN CHANGE — HIGH →

Unlike most blueprints, Phase 1 here deliberately includes the habit change, because **the owner's own ask is to stop giving tasks by voice***; every board after it is empty without My Day.*

09 GUARDRAILS

SWIMLANE · BRIEF LEFT BLANK, MASTER PLAN RULES APPLIED

AI ACTS ALONE	Remind a person of their own task and proof · Rank tasks by the auto rules · Check drawing name and sheet list · Compile summaries and scorecards for the owner · Import punches, apply late-mark rule
HUMAN SIGNS OFF	Pricing and negotiation · Drawing release for site · Change orders, POs, payments by value band · Messages to clients, contractors, vendors on dates, extra work, cost · Scorecard before any incentive or deduction · Late-mark waivers, outside-zone punches
NEVER AUTOMATED	Every quote, price, discount, committed date · Design judgement and client advice · Hiring, appraisal outcome, consequences · Continuous location tracking · Public ranking of people

All three brief guardrail answers were blank; these lanes join Rev A's careful defaults with the master plan's written rules (§5C.5, §9.5, §10). **Approval limits in brackets in the master plan are still the owner's to set.**

10 NEXT STEPS IMMEDIATE ACTIONS

01	**Confirm Rev B** and settle the quote figures and the headcount and departments. Mahesh.
02	**Setup call with Romana:** Claude Max bought; GitHub, Supabase and Vercel connected on the laptop; then the Starter Guide. Mahesh.
03	**Draw the organisation and set the limits:** departments, line managers, captains, deputies, PO, change-order, discount and payment bands. Mahesh.
04	**eSSL machine:** model, firmware, how it connects, how logs export today; employee machine IDs. Office admin.
05	**Weeks 1–2 writing sittings:** stage workflows, definitions of done, five project templates and tiers, role cards. Mahesh with build team.
06	**Studio Plan half-day:** values, 3 to 5 year target, brand promise, first Rocks, one Critical Number. Mahesh with leads.
07	**Write the three guardrails** in your own words, and pick 5 to 6 pilot users and one system admin. Mahesh.

SYSTEMS SPECIFIED	**DEADLINE ANCHOR**
1 foundation + 9 systems in 4 phases	Not stated; master plan sets a 12-month path with Phase 1 first

BUILD MODEL

Built by Mahesh himself in Claude Code on his own Claude Max, following the Archi Design Starter, UI and Continue Building guides. Where the master plan is newer and more specific than the brief, the master plan governs; this blueprint carries its detail, so the build reads this document alone.

REV B SUPERSEDES REV A (11.11.2026). EVERY CHANGE IN THIS REVISION TRACES TO THE LEAN MASTER PLAN V1.4.
SHEETS 1-3 ARE THE ONE-SHOT CAPTURE

00 EXECUTIVE SUMMARY

OVERVIEW

“My Business is Not growing because I am involved in daily office activities rather than focusing on a growth. Employees don’t take ownership. I have to follow up constantly.” Mahesh wrote that in his Systems Brief, and the Lean Master Plan v1.4 now on file turns it into one principle: manage by exception. The team works from a simple daily list, the system chases, escalates and scores, and the owner looks at one screen that shows only what needs him.

Archi Design wins work: 2 orders a month at an average of ₹10,00,000, 60% from returning clients, inside a 15-day sales cycle. What it cannot do is run that work without the owner. Every quote, price and follow-up is his, tasks are given by voice and WhatsApp, drawings reach site as WhatsApp images, site engineers who go straight to site are missed by the eSSL machine, and there is no standard format to measure anyone’s work.

This revision makes six structural changes, each traceable to the master plan: (1) **Attendance and Leave** becomes a Phase 1 system, with the eSSL machine kept and a phone punch for site days; (2) the Daily Task Sheet becomes **My Day with priority numbers**, and the Nudge chain merges into it; (3) **organisation, departments and approval limits** enter the foundation; (4) **Leads and Proposals** move from month 10 into Phase 2; (5) **Turnkey Controls** by project type and size are added; (6) the AI helpers (Nandini, the Site Controller and the Digital Ops Manager) are **parked** until the basics work, because the master plan excludes AI assistants from the first release. The result is one foundation and nine systems in four phases over twelve months, with Phase 1 in six weeks.

Mahesh builds it himself in Claude Code on his own Claude Max, on Next.js, Supabase and Vercel, with all code, data and accounts in the studio’s name, which meets the master plan’s full-ownership requirement.

01 WHAT CHANGED SINCE REV A

DELTA RECORD

Rev A’s current state (the funnel, the owner as the only link, the three problems in Mahesh’s words) remains valid and is carried in panels 01 to 05. This section records only what the Lean Master Plan v1.4 adds or changes.

1.1 A master plan is now on file

The Lean Business Management Software Master Plan v1.4 (November 2026) sets out nine modules, about 14 screens, five lean tests every feature must pass, a twelve-month roadmap and success targets at 12 months. Its cover still carries “[Studio Name]”; this blueprint treats it as Archi Design’s plan, which Mahesh should confirm. It governs where it is newer and more specific than the brief.

1.2 Attendance: the eSSL machine stays, site days count

The design and site teams use the eSSL machine, but site engineers who go straight to site, or home from site, are not recorded. The plan’s answer: one record a day from three sources (machine, phone punch, correction request), location captured only at the moment of punching, and the studio’s current rule built in: 10 minutes grace, three late marks in a month lead to a deduction of half a day’s salary.

> PAIN
> A site engineer at site by 9 AM is marked absent because the machine is in the office; late marks and leave are counted by hand from registers.

1.3 Turnkey projects of five types

Rev A described an interior and architecture practice. The plan adds turnkey work across interior, renovation, civil, commercial and factory projects, where cost overruns, contractor delays, safety and cash flow move to the studio. It

answers with one engine, five templates, three size tiers and nine turnkey controls switched on by type and size, and a weekly one-page Project Pulse for larger projects.

> PAIN
> Budgets, contractor bills and purchases are tracked by the owner; cost overruns are seen late (Rev A, accounts row).

1.4 Organisation, departments and authority

Rev A recorded managers and reporting lines as “not answered”. The plan defines up to five levels, six departments (Business and Client Relations; Architecture and Design; Projects and Site; Estimation, Procurement and Contracts; Accounts; HR and Admin), two reporting lines that never conflict (line manager for leave and appraisal, project captain for tasks), an approval matrix with value bands, and who sees what. Every limit is in brackets: they are Mahesh’s to set.

1.5 Every task carries a priority number

Tasks reach a person from the owner, captains, leads and colleagues, and the person guesses what comes first. The plan’s rule: one ordered list per person, numbered 1 to 5, levels Do first, Today, This week and Later, only leaders may set Do first and one at a time, a clash button so the employee never referees, and auto ranking for template tasks. This sharpens Rev A’s Daily Task Sheet into My Day.

1.6 A studio-level layer: Scaling Up

The plan adds the Scaling Up rhythm (Verne Harnish): a one-page Studio Plan, 3 to 5 quarterly Rocks, one Critical Number, a Digital Huddle each morning in place of a standing huddle, a generated Weekly Review agenda, a function accountability chart, and a studio cash view. It is one screen and a few routines, not a heavy module.

1.7 Leads move up; client satisfaction gets a target

Rev A placed the CRM for Instagram, Just Dial and referral in months 10 to 12. The plan puts Leads and Proposals in its first build, as a growth lever: every enquiry tracked with a next action and a first response inside 30 minutes. It also sets a 95%+ client satisfaction target with three one-tap rating points, a call within 24 hours for any score below 8, and a Green, Amber or Red health colour per project.

1.8 What is deliberately left out

The plan excludes, until the basics work: Gantt charts, complex Kanban boards, public leaderboards, 360-degree appraisals, **AI assistants**, a vendor portal, full payroll processing, continuous GPS tracking, referral engines and festival-greeting automation. Rev A’s three AI employees (Nandini, the Site Controller, the Digital Ops Manager) therefore become D-01: the morning list, reminders and escalation run as rules in My Day, and the AI helpers return in the plan’s Phase 4 as optional.

1.9 The build: Mahesh builds it himself

The master plan was written for an outside vendor (an RFP, sprint demos, Flutter or React Native apps, AWS Mumbai). Mahesh is building it himself, so Rev B maps those requirements onto his own Claude Code build: Next.js for the app, PostgreSQL through Supabase in the Mumbai region, Vercel hosting, all code in the studio’s GitHub, rules in Settings, offline site entries, and a phone web app added to the home screen in place of store apps at first. The eSSL link is confirmed in week 1 (model and export method), with a scheduled file import as the fallback. The master plan’s acceptance checks become the done-when lines in section 03.

02 RECOMMENDED AI SYSTEMS

FOUNDATION + 9 SYSTEMS

ARCHI DESIGN STUDIO RECORD AND ORGANISATION

F-00 · FOUNDATION

WHAT IT IS	One database for every project, stage, person, task, drawing, punch and approval, plus the organisation: departments, levels, line manager and project captain for each person, deputies, and the approval matrix with value bands. Settings let the admin add a branch, team, service line or entity without a developer. `person → department → line manager · project → captain → tasks`
WHY FIRST	Every later system reads it, and the approval limits decide who signs what from day one. It is also the master plan's growth headroom: the same record serves a studio many times larger by settings, not code.
OPEN INPUT	The org chart as it is today and every value band (section 06).

ARCHI DESIGN STUDIO WAYS: SOPS, TEMPLATES, STUDIO PLAN

SYS-01

WHAT IT DOES	The writing lane, run from day 1. Holds the workflow for every stage (brief, concept, design development, working drawings, BOQ, execution, handover, after handover) with a definition of done and the proof each task needs; five project templates (interior, renovation, civil, commercial, factory) and three size tiers; quality gates (waterproofing, electrical and plumbing, false ceiling, carpentry, painting and flooring, final finishing); role cards with four metrics; and the one-page Studio Plan.
SOLVES	Rev A: "Employees dont follow SOP's", and SOPs that "live in your head".
ADOPTION	Two weeks of sittings with the owner; leads co-design the scorecards so the rules feel fair (master plan §17).

ARCHI DESIGN MY DAY AND ESCALATION

SYS-02 · FIRST DOMINO

WHAT IT DOES	Each person opens one list of 3 to 5 tasks numbered in the order to do them, with the reason for each number. Givers choose a level; the system sets the number and shows the effect before sending. Done needs proof (file, photo or note); Blocked and Clash alert the captain at once. People set their own dates each Monday; an evening two-tap check-in closes the day. A missed deadline triggers a reminder, then the captain, then the department head, then the owner. `task + level → number → done with proof → reminder → ladder`
SOLVES	"Everything gets completed because I have take personally follow up each and every day by giving them daily tasks and taking continuously follow up."
GUARDRAIL	The system never shortens or extends a deadline or changes an owner; a push by a leader is tagged "priority change" and never counts against the person. At most 3 notifications a day per person.

ARCHI DESIGN ATTENDANCE AND LEAVE

SYS-03 · NEW IN REV B

WHAT IT DOES	Builds one attendance record a day from the eSSL machine, a one-tap phone punch (server time, location and accuracy, site zone check) and correction requests. Applies 10 minutes grace and the three-late-marks rule, shows each person "Late marks this month: 1 of 3", handles site shift, on-duty, comp-off and leave in three taps, and exports a month-end summary to the payroll tool, Tally or Excel.
SOLVES	Master plan §9: site staff "cannot punch at the office machine"; HR "handled in registers and messages".
GUARDRAIL	Location only at punch, never between punches, after punch-out or on leave; visible to the person, their manager, HR and the owner only; kept for a set period. Waivers and outside-zone punches need the manager with a logged reason. The deduction rule must be in letters and policies staff have acknowledged; confirm with an HR or legal adviser.
OPEN INPUT	eSSL model, firmware and export method; employee machine IDs; shifts; site addresses for zones.

ARCHI DESIGN LEADS AND PROPOSALS

SYS-04 · MOVED UP

WHAT IT DOES	Every enquiry from Instagram, Just Dial, referral or the website lands in one five-stage pipeline (New, Contacted, Site Visit, Proposal Sent, Won or Lost) with an owner and a next-action date; an amber alert after 24 hours without action. Proposals come from templates with fee stages and a tracked link. Marking a lead Won creates the project from its template and puts the first week's tasks on My Day.
SOLVES	Rev A: "Every quote, every price and every follow up is yours, and nothing is recorded beyond your phone."
GUARDRAIL	Any fee below standard or discount waits for the owner (or the Business Head within a set percentage) and is logged with the reason.

ARCHI DESIGN DRAWING AND SITE CHAIN

SYS-05

WHAT IT DOES	A drawing register with status (Draft, Internal Review, For Client Approval, Released for Site, Superseded) and revision history; the site task stays locked until release. The site diary (photos first, works offline) records each day, measurement checks and readiness checks; a site question becomes a task for the designer with a deadline; quality gates need a photo checklist; snags and change orders are tracked; a design slip shifts dependent site tasks and alerts the people affected; a Friday three-week look-ahead lists drawings, materials and client decisions due.
SOLVES	"Tracking pending drawings, approvals and site requirements. Knowing the actual status of every project without calling someone."
GUARDRAIL	Every drawing is reviewed by the design lead, signed by the client and released by the captain or owner before it reaches site; nothing goes to a contractor without it.

ARCHI DESIGN OWNER EXCEPTION VIEW AND STUDIO PLAN SYS-06

WHAT IT DOES	One screen for the owner: red projects with the reason, tasks blocked over 24 hours, approvals waiting, low client scores, people missing commitments, revenue and pipeline against target, this quarter's Rocks and the Critical Number; "All clear" when nothing needs him. Team board for captains (queues, drag to reorder, clashes, load) and a department head view. A Digital Huddle each morning and a generated Weekly Review agenda.
SOLVES	Rev A: walking the office, calling the site, and still not knowing the real status.

ARCHI DESIGN SCORECARDS AND INCENTIVES SYS-07

WHAT IT DOES	Four metrics per role, calculated from records already in the system (for example a designer: on-time stages, first-time-right approvals, client satisfaction on design, promises kept). Two months in shadow mode, then a project incentive pool, a share of each project's gross margin set by the owner, split by role and score band, paid only if the project's client satisfaction and margin are on plan. A 12-month history supports appraisal.
SOLVES	"I cannot able to measure my employee's work in standard format."
GUARDRAIL	The owner signs every monthly scorecard before any incentive, deduction or appraisal figure is shown. Client, authority and supplier delays are excluded visibly; no public ranking; attendance is never counted twice; every manual adjustment logged with a reason.

ARCHI DESIGN CLIENT PAGE AND PULSE SYS-08

WHAT IT DOES	Each client gets a page with progress, photos, the next decision needed, documents and one-tap approvals. Three one-tap ratings (after design approval, mid-execution, at handover) and a recommend score at handover. Any score below 8 asks the captain to call within 24 hours; 6 or below alerts the owner. Each project shows Green, Amber or Red.
SOLVES	"So clients satisfaction index is becoming lower."
GUARDRAIL	The system never promises a date, scope or cost to a client; any reply to an unhappy client is drafted and approved by the owner.

ARCHI DESIGN TURNKEY CONTROLS, BY TYPE AND TIER

SYS-09 · NEW IN REV B

WHAT IT DOES	Switched on only for projects whose type and tier need them: contract and scope baseline, budget by cost code with committed and actual cost, procurement with quote comparison and long-lead tracking, contractor work orders and running bills, site store with challan photos, progress measured by BOQ value, client billing and project cash flow, safety and statutory trackers, and a weekly one-page Project Pulse. Later, the studio cash view (days to invoice, days to collect, cash conversion cycle).
SOLVES	Master plan §4: turnkey risk on cost, contractors, safety and cash; Rev A: "Cost overruns are seen late."
GUARDRAIL	Purchase orders, change orders and vendor payments are approved by value band; money never moves from the system; accounting and statutory work stay in the accounting tool.
NOTE	If a large civil, commercial or factory project is already running, budget, work orders and site store come forward for that project.

DETAIL CARRIED FROM THE MASTER PLAN, FOR THE BUILD

Screens (about 14): login and profile with theme picker; My Day; task detail; lead pipeline; proposal builder; project page; team board; Owner Exception View; My Scorecard; Settings (users, organisation, templates, rules); client project page; My Attendance and Leave; People (HR, org chart, attendance exceptions, leave, payroll export); Studio Plan. **Look:** clean and visual, mobile first, Light, Dark and three palettes plus the studio brand, chosen per user; progress ring and on-time streak for staff, no reports on staff screens; at most 5 required fields per form; at most 3 notifications a day per person; labels in the studio's own words; English, Hindi and Marathi labels. **Auto ranking order:** Do first by a leader; blocking others; critical path due within 2 days; supports a Rock; then by due date and waiting time. **Escalation:** person, then team lead or captain, then department head, then owner; an approval waiting over 1 working day moves up one level. **Visibility:** employees see their own tasks, score, attendance and assigned projects; captains their team and project, with cost only on Tier 2 and 3 projects they manage; department heads their department and only the health colour of others; HR people records but no project costs; the owner everything, every override logged; clients their own project page only.

NOTE: THE EXISTING STACK

Instagram, Just Dial, referral: kept as lead sources, entering SYS-04. **eSSL machine:** kept, linked to SYS-03; never replaced. **Payroll tool, Tally or Excel:** kept; receives the attendance and incentive export; full payroll is not built. **WhatsApp:** stays for conversation; system messages start inside the app and by email, and move to the WhatsApp Business API only with the owner's yes on its cost. **Added:** Claude Max, GitHub, Supabase, Vercel.

DEFERRED · PARKED, NOT DROPPED

D-01 AI helpers: Nandini, Site Controller, Digital Ops Manager. The master plan leaves AI assistants out until the basics work; the same morning list, reminders and escalation run as rules in SYS-02 and SYS-06. Re-entry: months 11 to 12, as optional helpers for status answers and proposal drafts, on the Claude API with the owner's yes on cost. **D-02 Forecasts:** 13-week cash forecast, margin by client and project type, price what-if panel; months 11 to 12. **D-03 Native store apps:** the phone web app comes first; Android and iOS apps only if site use shows a need.

03 IMPLEMENTATION ROADMAP

4 PHASES · TWELVE MONTHS

Sequenced on the master plan's roadmap, compressed for a self-build: Phase 1 in six weeks instead of months 2 to 5, because Claude Code builds several systems side by side and the writing lane runs from day 1. Hours a week, busy season and a deadline were not stated; the critical path is the SOP sittings in weeks 1 to 2 and the eSSL check. Each phase is piloted with 5 to 6 people on 2 to 3 live projects before it goes to everyone.

P1 OWNERSHIP CORE: STOP THE DAILY CHASE

F-00 + SYS-01 TO SYS-03 · WEEKS 1-6

Why first: it removes the habit Mahesh named, runs attendance on a machine that already exists, and fills the records every later screen reads.

DONE WHEN Every one of the 7 opens their own numbered My Day each morning with a deadline and a definition of done, every closed task carries proof, no task has been given by voice or WhatsApp since the first live Monday, and every day's attendance, office or site, sits in one record with the late-mark counter visible to each person.

P2 ONE CHAIN FROM ENQUIRY TO SITE

SYS-04 + SYS-05 + SYS-06 · WEEKS 7-12

DONE WHEN Every enquiry has an owner and a next action, every live site has a dated report with stamped photos for each working day, every drawing on site carries Released for Site with the old version withdrawn, and the owner opens one Exception View at 9 AM instead of calling anyone.

P3 FAIR SCORES, HAPPY CLIENTS, CONTROLLED COST

SYS-07 + SYS-08 + SYS-09 · MONTHS 4-6

DONE WHEN Two months of shadow scorecards have been reviewed with the team and accepted as fair, every client rating below 8 was called within 24 hours, and every Tier 2 and Tier 3 project shows budget, committed and actual cost with a weekly Project Pulse.

P4 MONEY, PEOPLE, INDEPENDENCE

INCENTIVES LIVE, BILLING, HR, CASH VIEW · MONTHS 7-12

The brief's "worth it" was not answered; this finish line uses the master plan's 12-month success targets until Mahesh writes his own.

DONE WHEN The owner spends under 30 minutes a day on follow-ups with one 30-minute weekly review, incentives are paid only from signed scorecards, the payroll attendance summary is ready within one day of month-end, and every person can name this quarter's Rocks.

04 GUARDRAILS

BRIEF BLANK · MASTER PLAN RULES APPLIED

NOT ANSWERED IN THE BRIEF: all three guardrail questions were blank. Rev B applies Rev A's careful defaults joined with the rules written in the master plan, listed in panel 09, until Mahesh writes his own.

FROM THE MASTER PLAN: "Location is captured only when the person punches in, out or checks in to a site." · "No public ranking." · "Shadow mode for the first 2 months: scores and would-be incentives are shown but not paid." · "Any manual adjustment by the owner is recorded with the reason in the audit log."

APPROVAL LIMITS: change orders, purchase and work orders, discounts and vendor payments by value band; an approval waiting over 1 working day moves up one level; a named deputy covers leave. Every band is in brackets in the plan and is Mahesh's to set.

ERROR PROTOCOL: every action is written to a log nobody can edit; one switch turns all automatic behaviour off; a wrong rule is fixed in Settings, tested on the pilot group, and switched back on.

05 THE NUMBERS

FLAGGED, NOT RESOLVED

(1) **Quotes to orders:** 3 quotes and 2 orders a month is two in three, while "4 out of 100 quotes" is four in a hundred; carried from Rev A, still to settle. (2) **Headcount and roles:** the brief says 7, designers and site engineers, managers not answered; the master plan describes six departments, project managers, a store keeper, accounts, HR and sales roles. Which roles exist today, and which are the plan for growth? (3) **Studio name:** the master plan's cover reads "[Studio Name]"; confirm it is Archi Design's plan. (4) **Turnkey work:** the brief lists no turnkey projects; how many are running, of which types and sizes? (5) **Incentive pool:** the plan suggests 3% to 5% of gross margin "to be decided by you"; not yet set. (6) **Deadline, busy season and hours a week:** not stated.

The numbers say the studio converts well and keeps its clients; the leak is the owner's time, which is why Phase 1 is My Day and attendance rather than sales.

06 NEXT STEPS

DETAIL BEHIND PANEL 10

Panel 10 carries all seven actions; three need detail.

03	**Organisation and limits:** draw the studio as it is today (departments, who heads each, line manager and deputy for each person, project captains) and write the bands you are comfortable with: change order up to ₹____ by the project manager; purchase or work order up to ₹____ by the project manager and ₹____ by a department head; discount up to ____% by the Business Head; vendor payment up to ₹____ by the Accounts Head; owner above each. Mahesh.
04	**eSSL and attendance:** the machine's model and firmware, network or cable, whether it pushes logs or they are exported; every employee with machine ID, shift and normal place of work; the attendance and leave policy exactly as run today; each site's address for its zone. Office admin.
05	**The writing sittings, weeks 1 to 2:** the 10 to 15 tasks you chase every day; one page per project stage; existing proposals, agreements, drawing checklists, BOQ formats and site checklists; what "Red project" means for you; draft role scorecards. Mahesh with build team.

EVERY ITEM IN THIS DOCUMENT TRACES TO THE SYSTEMS BRIEF, THE REV A BLUEPRINT AUDIT (11.11.2026) OR THE LEAN MASTER PLAN V1.4 (NOVEMBER 2026).
NO FIGURES ADDED BEYOND THOSE THE CLIENT PROVIDED; UNKNOWNS ARE NAMED, NOT GUESSED. REV B SUPERSEDES REV A IN FULL.
