ARCHI DESIGN
AI SYSTEMS BLUEPRINT

Archi Design is a seven-person architecture and interior design practice run by Mahesh R. Khandagale, in the ₹10 – 50 Lakh a month turnover band. Enquiries come from Instagram, Just Dial and referral, handled mostly by the owner himself; by his own count about 8 leads become 3 quotes and 2 orders a month, at an average order value written as 1000000, on a 15 day cycle, with 60% of customers returning. Every quote, every price, every follow up and every morning's task list sits on the owner's desk today. This blueprint proposes a daily task sheet first, then a site diary and drawing release flow, then the boards and an AI follow-up desk, in stages over 90 days, with the in-depth pages counting roughly ₹88,000 a month and around 200 hours a month of follow up returned to the business.

PREPARED FOR
MAHESH R. KHANDAGALE
BLUEPRINT AUDIT 11.11.2026
ARCHI DESIGN

01 THE NUMBERS
DASHBOARD TILES · AS PROVIDED BY CLIENT

8	3	4	2	1000000	15 Days	60%	7
LEADS A MONTH AS WRITTEN.	QUOTES A MONTH AS WRITTEN.	ORDERS OUT OF 100 QUOTES AS WRITTEN. DOES NOT SIT WITH 3 QUOTES AND 2 ORDERS A MONTH; SEE NOTE BELOW.	ORDERS A MONTH AS WRITTEN.	AVERAGE ORDER VALUE AS WRITTEN, IN RUPEES (₹10,00,000).	SALES CYCLE AS WRITTEN.	REPEAT CUSTOMERS AS WRITTEN.	TOTAL HEADCOUNT AS WRITTEN. DESCRIBED AS DESIGNERS AND SITE ENGINEERS; MANAGERS NOT ANSWERED.

Taken together these figures describe a practice that wins 2 projects a month at an average value of ₹10,00,000, with 60% of work coming from customers who return, and they sit comfortably inside the stated ₹10 – 50 Lakh turnover band. One pair cannot stand together: 3 quotes becoming 2 orders a month is a conversion of two in three, while the answer to 'out of 100 quotes' is 4, which is four in a hundred. Both are printed as given; one of them is a monthly snapshot and the other is a lifetime impression, or one is simply mistyped, and that is yours to settle before any lead or quote target is set from this sheet. The headcount of 7 is given without a split between designers and site engineers and without any manager, so the figure stands alone and nothing on this sheet assumes how many sit in the office versus on site. Nothing was stated about cost, margin, collection or hours the owner can give, so no figure here speaks to cash or capacity.

02 THE MONEY PATH TODAY
FLOWCHART · ENQUIRY TO FINAL PAYMENT

01
Enquiry: Instagram, Just Dial and Referral
Station 1 as written, handled 'My Self mostly'. Nothing recorded beyond the owner's phone.

02
Quote and price
Not listed as a station; taken from the people map: 'Every quote, Every price' is the owner's.

03
Follow up to close
Not listed as a station; taken from the people map: 'Every follow up' is the owner's. 15 Days from first contact by their own count.

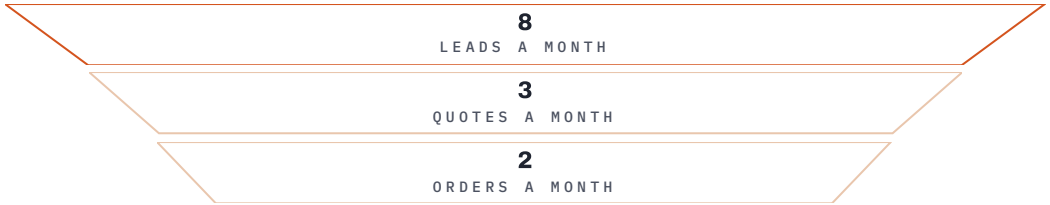

☐ STILL DONE BY HAND 3 OF 3 STATIONS

Only one station of the money path was written down, the enquiry sources, and it is marked as the owner's work. The two stations after it are drawn from the owner's own description of what he personally handles, not from the money path itself. Everything from a signed order to final payment, the stages at which a client is billed, who raises the bill, who collects, and how long collection takes, is not stated and is left blank here. Every drawn station is manual and owned by one person, which is the finding: the money path is the owner's phone. The in-depth pages keep pricing, negotiation and every client message in the owner's hand and treat a simple enquiry record as a later-stage build once project data is flowing.

BUSINESS	SITES	STACK KEPT	PART
Architects & Interior Designers	Designs in office and work on site or field.	Instagram	Current state

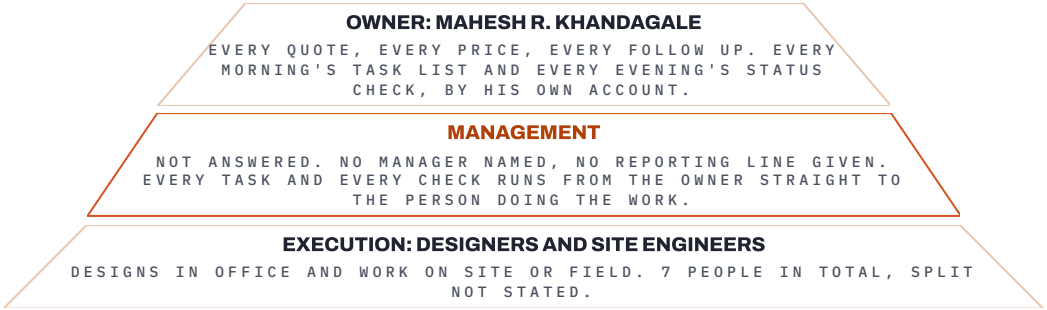

03 WHERE THE VOLUME GOES FUNNEL

8 LEADS BECOME 3 QUOTES BECOME 2 ORDERS, BY THE OWNER'S OWN MONTHLY COUNT.

The shape is right: it narrows as it descends. The loss is at the top, 8 leads to 3 quotes, where five of eight enquiries never receive a quote and nothing today records why. The bottom, 3 quotes to 2 orders, is a very strong close, and it is this step that collides with the separate answer of 4 orders out of 100 quotes. Both figures are the owner's; the funnel is drawn from the monthly ones, and the 4-in-100 is printed on its tile for the owner to reconcile.

04 WHO HOLDS THE WORK PYRAMID · ORG LAYERS

"Employees don't take ownership. I have to follow up constantly."

The middle of this business is empty, and that is the most common shape we see at this size. With no management layer, the owner is the only link between the office and the site, and the only person who knows the actual status of any project. The in-depth pages do not propose hiring into the gap; they propose a daily task sheet with proof of done, an Ownership Board, and an AI follow-up desk named Nandini that does the 9 AM and 6 PM round so the follow up stops being the owner's job. Decisions about people stay with the owner.

05 TWO PLACES OF WORK, ONE PHONE BETWEEN THEM BEFORE / AFTER

THE SPLIT

Office and site

Was: Designs in office and work on site or field. Drawings go to site as WhatsApp images, site photographs scatter across groups, and queries arrive by phone call to whoever picks up.

Now: The Daily Task Sheet runs on every phone, office and site alike. The Site Diary turns one evening entry into a stamped site report and a routed drawing query. The Drawing Release Flow stamps a drawing Approved for Execution only after the owner's sign-off and withdraws the old version.

THE HABIT

Daily tasks by voice, status by phone call

Was: Everything gets completed because I have take personally follow up each and every day by giving them daily tasks and taking continuously follow up.

Now: The Task Ownership SOP Skill drafts each person's list in the same format every day. Done needs proof, not done needs a reason. The Nudge and Escalate Chain reminds at the deadline, copies the next person waiting, and flags RED. No message leaves the office to a client without the owner pressing send.

THE MEASURE

No standard format to judge work

Was: I cannot able to measure my employee's work in standard format. Employees make repeated mistakes and quality suffers. Employees dont follow SOP's.

Now: The SOP Skill writes the role-wise checklists once. The Scorecard App counts timeliness, quality, SOP adherence and rework the same way every week. The owner signs every monthly scorecard before any incentive or appraisal figure reaches an employee.

Nothing was stated under 'already tried', 'never again', 'hours a week' or 'worth it if', so this panel reads the split of the business rather than a history of adoption. The build order follows the owner's own vision document, with the smallest piece first: the task sheet every other system reads from.

PART
Current state

06 **RECOMMENDED AI SYSTEMS** SYSTEMS · FOUNDATION FIRST

F-00 P1

Archi Design Project and Task Record

ONE ROW PER PROJECT, STAGE AND PERSON
↓
TASK, OWNER, DEADLINE, PROOF REQUIRED
↓
EVERY TOOL BELOW WRITES TO IT ONCE
↓
BOARDS AND NANDINI READ FROM IT
↓
NOTHING ENTERED TWICE

WHY FIRST
the Daily Task Sheet, the Site Diary, the Ownership Board and the Scorecard App all need the same project, stage and person list; today that list lives in the owner's phone and head.

OPEN INPUT
the 7 people are described only as designers and site engineers; role of each, and any manager, is not stated and must be named before week 3.

SOLVES NOTHING TODAY CONNECTS DESIGNS IN OFFICE WITH WORK ON SITE EXCEPT THE OWNER'S PHONE.

SYS-01 P1

Archi Design SOP Skills (Task Ownership and Archi Design Way)

OWNER STATES WORKFLOW PER STAGE: CONCEPT, WORKING DRAWINGS, SITE MARKING, EXECUTION, HANDOVER
↓
DEFINITION OF DONE WRITTEN FOR EACH TASK TYPE
↓
ROLE-WISE CHECKLISTS FOR DESIGNER, SITE ENGINEER, OFFICE DESK
↓
STANDARD MEASUREMENT FORMAT DRAFTED
↓
LOADED ONCE, CHECKED AGAINST EVERY DAY AFTER

ADOPTION
employees do not follow SOPs because they live only in the owner's head; this is the sitting that moves them out, and it needs the owner's hours in weeks 1 to 2.

OPEN INPUT
hours a week the owner can give is not stated; the two-week sitting cannot be sized until it is.

SOLVES EMPLOYEES DONT FOLLOW SOP'S, AND THERE IS NO STANDARD FORMAT TO MEASURE WORK.

SYS-02 P1

Archi Design Daily Task Sheet

EACH OF 7 PEOPLE OPENS OWN LIST ON A BASIC PHONE
↓
DONE NEEDS PROOF: FILE LINK, SITE PHOTO OR NOTE
↓
NOT DONE NEEDS A REASON FROM A SHORT LIST
↓
NEXT DEPENDENT TASK OPENS ON ITS OWN
↓
RECORD UPDATES; NOBODY IS CALLED

WHY FIRST
it is the easiest build on the map and removes the habit that eats the day, giving tasks by voice and chat and calling in the evening; every later system reads the done-with-proof marks it collects.

ADOPTION
tasks stop being given by voice from the first Monday it is live; if the owner keeps a parallel WhatsApp round, the sheet dies.

SOLVES I HAVE TO FOLLOW UP CONSTANTLY; EVERYTHING GETS COMPLETED ONLY BECAUSE I GIVE DAILY TASKS AND CHASE.

SYS-03 P2

Archi Design Site Diary

SITE ENGINEER LOGS PROJECT, STAGE, PHOTOS, WORK DONE
↓
CONTRACTOR AND VENDOR ATTENDANCE TICKED
↓
MATERIAL NEEDED GOES TO THE VENDOR QUEUE
↓
DRAWING QUERY ROUTED TO THE RESPONSIBLE DESIGNER WITH A DATE
↓
SYNCS WHEN THE PHONE FINDS NETWORK

ADOPTION
site engineers already report, just by phone call and WhatsApp group; the diary is the same facts in one place, filled before leaving site as the SOP requires.

OPEN INPUT
busy season is not stated; launching this in the heaviest site month would strain it.

SOLVES I DON'T GET ACCURATE REAL-TIME INFORMATION ABOUT PROJECTS; PHOTOGRAPHS SCATTERED, MATERIAL NEEDS REMEMBERED NEXT MORNING.

SYS-04 P2

Archi Design Drawing Release Flow

DESIGNER MARKS DRAWING READY
↓
VERSION NAME AND SHEET LIST CHECKED AGAINST SOP
↓
LANDS IN THE OWNER'S APPROVAL QUEUE
↓
OWNER SIGNS OFF; STAMPED APPROVED FOR EXECUTION
↓
SENT TO SITE ENGINEER, OLD VERSION WITHDRAWN
↓
SITE QUERY RETURNS TO SAME DESIGNER WITH A DEADLINE

GUARDRAIL
the owner signs off every drawing before it is stamped; nothing reaches a site without his approval in the queue.

ADOPTION
drawings currently go to site as WhatsApp images; the flow only works if that channel is closed for drawings.

SOLVES EMPLOYEES MAKE REPEATED MISTAKES AND QUALITY SUFFERS; REWORK FROM CONTRACTORS BUILDING OFF THE WRONG REVISION.

SYS-05 P3

Archi Design Ownership Board

READS THE TASK SHEET; NOTHING ENTERED TWICE
↓
ONE ROW PER EMPLOYEE, ONE PER PROJECT
↓
RED, AMBER, GREEN BY RULES THE OWNER SETS
↓
REPEATED MISSES SHOWN BY TASK TYPE
↓
TASKS STUCK ON CLIENT OR OUTSIDE REASONS MARKED SEPARATELY

WHY FIRST
it cannot be switched on before week 8 because it only shows what the sheet has collected; an empty sheet makes an empty board.

OPEN INPUT
the colour rules, grace periods and what counts as a miss are the owner's to set and are not stated.

SOLVES I CANNOT MEASURE MY EMPLOYEE'S WORK IN STANDARD FORMAT; KNOWING ACTUAL STATUS WITHOUT CALLING SOMEONE.

SYS-06 P3

Archi Design Nudge and Escalate Chain

DEADLINE PASSES WITH NO DONE MARK
↓
REMINDER TO TASK OWNER WITH PROOF REQUIRED
↓
AFTER GRACE PERIOD, COPY TO THE NEXT PERSON WAITING
↓
TASK TURNS RED ON THE BOARD AND IN THE EVENING SUMMARY
↓
DRAFT DELAY MESSAGE PREPARED IF A CLIENT OR CONTRACTOR DATE IS HIT

GUARDRAIL
before any delay message goes to a client, contractor or vendor, the owner reads the draft and presses send himself; the chain never shortens or extends a deadline on its own.

SOLVES THE CONTINUOUS FOLLOW-UP THROUGH THE DAY AND THE MENTAL LIST OF WHO STILL HAS TO BE CHASED.

SYS-07 P3

Archi Design Follow-up Desk, Nandini

9 AM: CONFIRMS EVERY PERSON HAS TODAY'S LIST
↓
THROUGH THE DAY: ASKS FOR MISSING MARKS OR REASONS
↓
6 PM: ONE SUMMARY TO THE OWNER, DONE, PENDING, BLOCKED, REPEATED MISSES
↓
FRIDAY: PATTERN NOTE ON WHICH TASK TYPES SLIP AND WITH WHOM
↓
REPORTS TO THE OWNER ONLY

GUARDRAIL
any note about an employee's performance that goes to the employee, and anything linked to appraisal or incentive, is drafted and sent only after the owner signs off.

ADOPTION
the team meets her as the office follow-up desk, not a judge; decisions on consequences stay with the owner.

SOLVES EMPLOYEES DON'T TAKE OWNERSHIP; THE OWNER IS THE DAILY FOLLOW-UP PERSON, WHICH IS THE ROLE KEEPING ARCHI DESIGN FROM GROWING.

SYS-08 P3

Archi Design Scorecard App

WEEKLY: TASKS CLOSED, ON TIME, CHECKLIST TICKED, REWORK LOGGED
↓
ONE CARD PER PERSON IN THE SAME FORMAT EVERY WEEK
↓
MISTAKE REGISTER TAGGED TO THE SOP LINE SKIPPED
↓
MONTHLY ROLL-UP ON THE OWNER'S TABLE
↓
OWNER SIGNS BEFORE ANYONE SEES A MONEY FIGURE

GUARDRAIL
the owner signs off every monthly scorecard before any incentive, deduction or appraisal figure is shown to the employee; the app counts, it does not judge.

ADOPTION
the first cards are only as fair as the SOP lines written in weeks 1 to 2; a card with no standard behind it restarts the argument.

SOLVES APPRAISAL IS ARGUMENT AND MEMORY BECAUSE THERE WAS NO STANDARD FORMAT.

Eight systems and one shared record, all drawn from the three problems in the in-depth pages and from the brief as given: 7 people, designers and site engineers, work in office and on site. Everything stands on the Daily Task Sheet; the Command Centre, Project Health Wall, Client Pulse, Site Controller and Digital Ops Manager from the owner's own vision are months 4 to 8 and are not on this twelve-week sheet. No system here sets a price, gives a discount or commits a date; every quote, every price and every follow up to a client remains, as the owner wrote, on his desk.

07 IMPLEMENTATION ROADMAP GANTT · THREE MONTHS

PHASE	P1 WRITE IT DOWN, THEN GIVE TASKS BY SHEET, NOT BY VOICE		P2 SITE AND DRAWINGS FLOW INTO THE SAME PLACE AS TASKS		P3 THE FOLLOW-UP LEAVES THE OWNER'S DESK	
SYSTEM	WK 1–2	WK 3–4	WK 5–6	WK 7–8	WK 9–10	WK 11–12
F-00 Archi Design Project and Task Record	Shared record					
SYS-01 Archi Design SOP Skills (Task Ownership and Archi Design Way)	Write the SOPs					
SYS-02 Archi Design Daily Task Sheet		Task sheet on every phone				
SYS-03 Archi Design Site Diary			Site report from the field			
SYS-04 Archi Design Drawing Release Flow			Approve, stamp, release			
SYS-05 Archi Design Ownership Board				Who holds the chain		
SYS-06 Archi Design Nudge and Escalate Chain					Remind, copy, flag	
SYS-07 Archi Design Follow-up Desk, Nandini					Nandini starts the round	
SYS-08 Archi Design Scorecard App					First monthly scorecards	

P1 DONE WHEN

Every one of the 7 people opens their own task list on their phone each morning with a deadline and a definition of done, every closed task carries a proof, and no task has been given by voice or WhatsApp since the first live Monday.

P2 DONE WHEN

Every live site has a dated site report with stamped photographs for every working day of the past week, every drawing on any site carries the Approved for Execution stamp with the old version withdrawn, and every open drawing query has a designer's name and a date against it.

P3 DONE WHEN

The owner's own 'worth it if' was not answered; in its absence the test is his complaint as written: a full working week passes in which he has made no follow-up call, the 6 PM summary from Nandini has arrived every evening, and the first monthly scorecards sit on his table in the standard format before any employee has seen them.

08 WHY THIS BUILD ORDER 2 × 2 MATRIX

HIGH IMPACT · RUNS WITHOUT ANYONE CHANGING	HIGH IMPACT · NEEDS PEOPLE TO CHANGE
F-00 Archi Design Project and Task Record	SYS-01 Archi Design SOP Skills (Task Ownership and Archi Design Way)
SYS-04 Archi Design Drawing Release Flow	SYS-02 Archi Design Daily Task Sheet
SYS-06 Archi Design Nudge and Escalate Chain	SYS-03 Archi Design Site Diary
COMPOUNDING · NEEDS CLEAN DATA	**GROWTH · UNBLOCKS SCALING**
SYS-05 Archi Design Ownership Board	NOTHING HERE
SYS-07 Archi Design Follow-up Desk, Nandini	
SYS-08 Archi Design Scorecard App	

LOW DEPENDENCE ON HUMAN CHANGE → HIGH

Only the Task Sheet and the SOP sitting ask anyone to change how they work, and they are deliberately first because nothing else has data without them. The Drawing Release Flow and the Nudge chain then run on their own from what the sheet and diary collect. The Ownership Board, Nandini and the Scorecards are compounding: switched on at week 8 or later because they only show what has been collected, and an empty sheet makes an empty board. Nothing on this sheet is placed in the growth quadrant; the CRM for Instagram, Just Dial and referral enquiries is in the owner's vision but is a 12-month item, and the 8 leads, 3 quotes and 2 orders a month stay in his hand until then.

09 GUARDRAILS SWIMLANE · SET BY THE CLIENT

AI ACTS ALONE	NOT SET BY THE OWNER; THE CAREFUL DEFAULT APPLIES. · DEFAULT: REMIND A TEAM MEMBER OF THEIR OWN TASK AND THE PROOF REQUIRED. · DEFAULT: CHECK A DRAWING'S VERSION NAME AND SHEET LIST AGAINST THE SOP. · DEFAULT: COMPILE SUMMARIES, PATTERNS AND SCORECARDS FOR THE OWNER ONLY.
HUMAN SIGNS OFF	PRICING AND NEGOTIATION · NOT SET BY THE OWNER; THE CAREFUL DEFAULT APPLIES. · DEFAULT: EVERY DRAWING BEFORE IT IS STAMPED APPROVED FOR EXECUTION. · DEFAULT: EVERY MESSAGE TO A CLIENT, CONTRACTOR OR VENDOR ABOUT DATES, EXTRA WORK OR COST. · DEFAULT: EVERY MONTHLY SCORECARD BEFORE ANY INCENTIVE, DEDUCTION OR APPRAISAL FIGURE IS SHOWN.
NEVER AUTOMATED	NOT SET BY THE OWNER; THE CAREFUL DEFAULT APPLIES. · DEFAULT: EVERY QUOTE, EVERY PRICE, EVERY DISCOUNT AND EVERY COMMITTED DATE, AS HE WROTE. · DEFAULT: DESIGN JUDGEMENT AND WHAT A CLIENT IS ADVISED. · DEFAULT: HIRING, APPRAISAL OUTCOMES AND CONSEQUENCES FOR REPEATED MISTAKES.

All three guardrail answers were left blank. The lines above are not the owner's rules; they are the defaults the in-depth pages already apply under 'stays human', printed here so he can strike or tighten any of them. Until he does, the systems chase, check and draft, and bring only exceptions to him.

10 NEXT STEPS IMMEDIATE ACTIONS

01 Confirm or correct everything on these sheets: 8 leads, 3 quotes, 2 orders, 4 of 100 quotes, ₹10,00,000 average order, 15 day cycle, 60% repeat, 7 people; and settle the quote figures that cannot stand together. MAHESH R. KHANDAGALE	02 Set the three guardrails that were left blank: what the system may do alone, what waits for a signature, what is never automated. MAHESH R. KHANDAGALE	03 Name the 7 people by role, say whether anyone manages anyone, and state the hours a week the owner can give to the weeks 1 to 2 SOP sitting. MAHESH R. KHANDAGALE	04 Weeks 1 to 2: sit with the owner and write the workflows for concept, working drawings, site marking, execution and handover, with a definition of done for each task. BUILD TEAM WITH THE OWNER	05 Weeks 3 to 5: build and put the Daily Task Sheet on all 7 phones, and set the first live Monday on which tasks stop being given by voice. BUILD TEAM	06 State the deadline, busy season, anything already tried, and what 'worth it' looks like, so Phase 3's finish line is his own and not a default. MAHESH R. KHANDAGALE

Archi Design Daily Task Sheet

For problem 2: Problem 2: Employee Accountability, so the day runs without your daily chasing

It is the easiest build on the map and it removes the single habit that eats your day, giving tasks by voice and chat and then calling in the evening to ask what got done, worth a conservative 18 hours a month on its own. Every other system you imagined, the Ownership Board, the Scorecard App, the Command Centre and the Digital Ops Manager, needs the done-with-proof and not-done-with-reason marks this sheet collects, so it is the first domino in the plain sense that nothing else falls without it.

PROBLEM 1 OF 3

Running Archi Design without running every desk

> *“My Business is Not growing because I am involved in daily office activities rather than focusing on a growth. Employees don't take ownership. I have to follow up constantly. Employees make repeated mistakes and quality suffers. I cannot able to measure my employee's work in standard format. I don't get accurate real-time information about projects. Employees dont follow SOP's. So clients satisfaction index is becoming lower.”*

9 AM TOMORROW At 9 AM you open the Archi Design Command Centre for ten minutes, see which projects are red, which employee skipped an SOP step yesterday, and which client has not been heard from, and you leave the rest of the office to run on its own checklist.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

Archi Design SOP Skill

Your SOPs, written the way you say them, loaded once so the system can check work against them and draft the documents you keep writing by hand.

- It holds the Archi Design way of working for each role: designer, site engineer, and the office desk. Concept stage, working drawing stage, site handover, client presentation, each as a short checklist with a named owner.
- It encodes your quality rules: what a drawing must carry before it leaves the office, what a site engineer must record before he leaves site, what a client must be shown before a stage is called complete.
- It drafts role-wise job descriptions, stage checklists, and the standard format for measuring work that you say you do not have today: timeliness, quality, rework, client response.
- It drafts the gentle correction note to an employee who skipped a step, in your tone, so the reminder comes from the SOP and not from you personally.
- It drafts the client stage-completion message so every client hears from Archi Design in one consistent voice at every stage.

REPLACES

You explaining the same process verbally, again and again, and the SOPs that exist only in your head or in a file nobody opens.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

12 hours a month

2. MICRO-APP

AS YOU IMAGINED

Archi Design Scorecard App

A small tool where each week's work is entered against the standard format, and every employee gets a scorecard you did not have to compile.

- Inputs: for each designer and site engineer, the tasks closed this week, tasks closed on time, SOP checklist items ticked, rework instances logged, and client responses attended.
- Outputs: one card per person showing timeliness, quality, SOP adherence and rework, in the same format every week, and a monthly roll-up you can place on the table at review.
- The mistake register sits inside it. A repeated mistake is tagged against the SOP line that was skipped, so the pattern is visible, not just the incident.
- Role-based KPIs are set by you once from the SOP Skill. The app only counts; it does not judge.
- Because scorecards feed appraisal and incentive eligibility, nothing about money is shown to any employee until you have signed the card.

REPLACES

Your mental note of who is doing well and who is not, and the argument that follows because there was no standard format.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

8 hours a month

> OWNER APPROVES You sign off every monthly scorecard before any incentive, deduction or appraisal figure is shown to the employee.

3. DASHBOARD

Archi Design Command Centre

The one screen from your vision: every project, every person, every pending decision, RED, AMBER or GREEN, so you see exceptions and nothing else.

- Visible for the first time: which projects are drifting, which stage is waiting on whom, and how long it has waited, without you calling anyone.
- Visible: SOP adherence by person and by stage, drawn from the Scorecard App, so quality drops are seen before the client sees them.
- Visible: client satisfaction by project, from the stage-wise pulse replies, so the index you say is falling becomes a number you can watch rise.
- Visible: your own hours. The Command Centre logs how many approvals and decisions came to you each day, so you can see the owner-dependency shrinking.
- Financial health stays in a separate locked tab, visible only to you. Project costing and billing belong to the systems built for Problem 3 and are only summarised here.
- Daily task lists and project workflows feed this screen but are built under Problem 2 and Problem 3; this board reads them, it does not duplicate them.

REPLACES

Walking the office, calling the site, and still not knowing the real status.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

20 hours a month

4. AUTOMATION

Archi Design Client Pulse Automation

Every time a project stage is marked complete, the client is asked how it went, the answer lands on the Command Centre, and a poor answer reaches you the same day.

- Trigger: a stage is marked complete by the responsible designer or site engineer and the stage checklist is fully ticked. An unticked checklist does not trigger anything; it goes back to the person.
- Step one: the stage-completion message, drafted by the SOP Skill, is sent to the client on WhatsApp with a two-question pulse: satisfied with this stage, and anything pending from our side.
- Step two: the reply is recorded against the project and the responsible person, and the Command Centre colour updates.
- Step three: a poor reply, or no reply within two working days, opens an issue against the stage owner with a deadline and goes to the Command Centre as AMBER.
- Step four: a second poor reply on the same project, or an issue past its deadline, turns the project RED and comes to you with a drafted reply to the client.
- You approve the drafted reply to any unhappy client before it goes out. The system never promises a client anything on your behalf.

REPLACES

Learning that a client is unhappy only when the repeat work does not come, in a business where repeat customers are 60 percent.

DIFFICULTY

Medium

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹20,000 a month · 6 hours a month

5. AI AGENT — SCOPING CALL

Archi Design Digital Ops Manager

The Digital Operations Manager from your own write-up: an AI employee that chases, checks and summarises, so the follow-up comes from it and the decisions come to you.

- Trigger: it runs every morning before the office opens and every evening after site reports are in, and it wakes up whenever the Command Centre turns something AMBER or RED.
- Morning: it sends each of the seven team members their open items for the day with the SOP checklist attached, and sends you the exception list only: what is red, what needs a decision, who is overloaded.
- During the day: it follows up on its own. An untouched item gets a nudge, a skipped checklist step gets the correction note from the SOP Skill, a repeated mistake is logged in the Scorecard App and flagged.
- Evening: it sends you the summary you described, completed work, pending tasks, delays, and client replies, in one message, with a drafted question for anything it could not resolve.
- Weekly: it compiles the scorecards and the client satisfaction read and writes a two-paragraph note on recurring problems and workload imbalance.
- It reports to you only. It never sets a price, gives a discount, or commits a date to a client; those drafts are placed in front of you and wait.

REPLACES

You as the daily follow-up person, which is the role that is keeping Archi Design from growing.

DIFFICULTY

Hard

CONFIDENCE

Medium

CONSERVATIVE SAVING

₹25,000 a month · 30 hours a month

> OWNER APPROVES Any message to a client that touches scope, dates or money, and any incentive or deduction figure, waits for your approval before it leaves the system.

PROBLEM 2 OF 3

Problem 2: Employee Accountability, so the day runs without your daily chasing

> *“Everything gets completed because I have take personally follow up each and every day by giving them daily tasks and taking continuously follow up.”*

9 AM TOMORROW At 9 AM tomorrow each designer and site engineer already has today's task list on their phone with a deadline and a definition of done, the evening summary from yesterday is sitting in your inbox, and you have not made a single follow-up call.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

Archi Design Task Ownership SOP Skill

Encodes how a task is given at Archi Design: who owns it, by when, what a finished task must contain, and who receives it next. Drafts the daily task list for each designer and site engineer and the hand-over note when one task passes to the next person.

- Holds your predefined workflows for each project stage in plain language: concept, working drawings, site marking, execution, handover.
- For every task it writes a definition of done, for example a drawing task is done only when the file link, revision number and a one-line note are attached.
- Drafts each morning's task list per person in the same format every day, so work can be measured in a standard way later.
- Drafts the hand-over note so the next person starts without asking you what came before.
- You keep the authority to change any task, owner or deadline; the skill only drafts.

REPLACES

Your morning round of giving tasks verbally and on WhatsApp, and the different formats each employee uses to report back.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

12 hours a month

2. MICRO-APP

Archi Design Daily Task Sheet

A small phone-friendly tool. Inputs: project, stage and person. Output: that person's task list for the day with deadline, dependency and proof required, plus a done-with-proof button and a not-done-with-reason button.

- Each of your 7 people opens one screen and sees only their own tasks for the day.
- Marking done requires proof: a file link, a site photo, or a short note, as the SOP skill defines.
- Marking not done requires a reason picked from a short list: waiting on client, waiting on drawing, material not on site, other.
- The next dependent task opens automatically once the previous one is marked done and, where the SOP says so, reviewed.
- Works on a basic Android phone on site; no laptop needed for site engineers.

REPLACES

Daily task giving by voice and chat, and the evening calls asking what got done.

DIFFICULTY

Easy

CONFIDENCE

High

CONSERVATIVE SAVING

18 hours a month

3. DASHBOARD

AS YOU IMAGINED

Archi Design Ownership Board

Makes visible what you cannot see today: who is holding the chain. For each person, tasks given, done on time, done late, done without proof, and repeated misses. For each project, the next task and whose desk it is on.

- One row per employee, one row per project, colour marked RED, AMBER, GREEN by the rules you set.
- Shows repeated misses by task type, so the same mistake made again and again becomes a pattern you can see instead of a surprise.
- Shows which tasks are stuck waiting on a reason outside the team, such as client approval, so you do not blame the wrong person.
- A weekly view feeds the standard-format performance measurement you asked for, without you keeping a register.
- This board reads from the Daily Task Sheet; nothing has to be entered twice.

REPLACES

Calling each employee to find out what is pending and relying on memory for who keeps slipping.

DIFFICULTY

Medium

CONFIDENCE

High

CONSERVATIVE SAVING

8 hours a month

4. AUTOMATION

Archi Design Nudge and Escalate Chain

Trigger: a task deadline passes with no done mark. The chain reminds the employee, then copies the next person waiting, then flags the Ownership Board for you. No message leaves the office without your approval.

- Step one: at the deadline, a reminder goes to the task owner on their phone with the task and the proof required.
- Step two: after the grace period you set, a second reminder goes out with a copy to the person whose task is waiting on this one.
- Step three: if still open, the task turns RED on the Ownership Board and appears in your evening summary with the reason given, if any.
- Step four: if the delay affects a client or a contractor date, a draft message is prepared for you to read and send.
- You set the grace periods per task type; the chain never shortens or extends a deadline on its own.

REPLACES

Your continuous follow-up through the day and the mental list of who you still have to chase.

> OWNER APPROVES Before any delay message goes to a client, contractor or vendor, you read the draft and press send yourself.

5. AI AGENT SCOPING CALL

Archi Design Follow-up Desk, an AI employee called Nandini

Trigger: 9 AM and 6 PM every working day. Nandini checks the Daily Task Sheet, chases open marks, collects reasons, and reports to you in one short message. She never changes a task, owner or deadline.

- Morning: confirms every designer and site engineer has today's list, and tells you if anyone has no tasks or too many.
- Through the day: asks for the missing done mark or reason from anyone whose task passed its deadline, politely and in the same words each time.
- Evening: sends you a summary of completed work, pending tasks, who is blocked and why, and any repeated misses.
- Friday: sends a pattern note, for example which task types keep slipping and with whom, so you can fix the SOP or the training, not just the person.
- Reports to you only; the team sees her as the office follow-up desk, not as a judge. Any decision on consequences stays with you.

REPLACES

The part of your day spent asking, reminding and remembering, and the evening phone calls to piece together what happened.

> OWNER APPROVES Any note about an employee's performance that goes to the employee, and anything linked to appraisal or incentive, is drafted for you and sent only after you sign off.

PROBLEM 3 OF 3

Problem 3: Project Management and Execution Control

> *“Project Management and Execution Control. I am facing the challenges such as: Monitoring multiple ongoing projects simultaneously. Ensuring projects finish within committed timelines. Coordinating designers, site supervisors, contractors and vendors. Tracking pending drawings, approvals and site requirements. Knowing the actual status of every project without calling someone.”*

9 AM TOMORROW At 9 AM tomorrow the Archi Design Project Health Wall shows every live site as RED, AMBER or GREEN, the drawings still pending for each, and last evening's site photographs, and you have not called anyone to find out.

FIVE WAYS TO ATTACK IT

1. CLAUDE SKILL

Archi Design Drawing Release and Site Quality SOP

Encodes your rule that only approved drawings reach site, with a version naming method, a stage-wise checklist for civil, electrical, false ceiling, carpentry and finishing, and the exact words a site instruction must carry.

- Holds the drawing version rule: one file name pattern, one current version, every superseded sheet marked as withdrawn so no contractor builds from an old print.
- Holds the quality checklist for each execution stage in the form your site engineers already use on site, with photo points that must be captured before the next stage starts.
- Drafts the site instruction note, the drawing revision log and the snag list in Archi Design's standard format, so a designer or site engineer fills in facts and does not invent the format each time.
- Drafts the vendor and contractor requirement note from a site query, listing material, quantity, drawing reference and needed-by date, ready for your review before it is sent.

REPLACES

Drawings sent as WhatsApp images, verbal site instructions, and rework caused by a contractor working from the wrong revision.

2. MICRO-APP

AS YOU IMAGINED

Archi Design Site Diary

A phone tool for site engineers: project, stage, photographs, work done, contractor present, material needed and any drawing query go in; a structured daily site report, a routed drawing request and an updated snag list come out.

- Inputs: project name, execution stage from the SOP list, up to a handful of tagged photographs, work completed today, contractor and vendor attendance, material required, and any question about a drawing.
- Outputs: a one-page site report in Archi Design format, a drawing query sent straight to the responsible designer with a needed-by date, and a material requirement note for the vendor queue.
- Every photograph is stamped with project, stage and date, so you can open any site on any day without asking who took the picture.
- Works in the field with poor signal: the engineer fills it on site and it syncs when the phone finds network.

REPLACES

Site photographs scattered across WhatsApp groups, drawing queries asked on phone calls, and material needs remembered the next morning.

3. DASHBOARD

Archi Design Project Health Wall

One screen with every live project as RED, AMBER or GREEN, its milestones against the committed date, drawings pending with each designer, open site queries, rework items and what is waiting on which contractor or vendor.

- Each project row shows the committed handover date, the current stage, the next milestone and the number of days the next milestone is ahead or behind, drawn from the Site Diary and the drawing release flow.
- Colour rules are yours to set: a milestone past its date turns the project RED, a drawing query unanswered beyond your chosen limit turns it AMBER, a stage closed with its checklist and photos stays GREEN.
- A pending drawings column lists every drawing a site has asked for and which designer holds it, so a site is never stalled quietly.
- A rework column lists every snag reopened after a stage was closed, which is the earliest sign that quality is slipping on a site.

REPLACES

Calling the site engineer, then the designer, then the contractor, to learn where one project actually stands.

4. AUTOMATION

Archi Design Drawing Release Flow

Triggered when a designer marks a drawing ready. The system checks the version rule, runs the SOP checklist, waits for your design sign-off, then stamps and releases the drawing to the site engineer and withdraws the old version.

- Trigger: designer marks a drawing as ready for site in the Archi Design system.
- Step 1: the version name and sheet list are checked against the Drawing Release SOP; anything missing goes back to the designer with the gap named.
- Step 2: the drawing and its checklist land in your approval queue with the project, stage and site needed-by date shown.
- Step 3: after your sign-off the drawing is stamped Approved for Execution, sent to the site engineer, logged on the Project Health Wall, and the earlier version is marked withdrawn.
- Step 4: any site query raised against that drawing returns to the same designer with a deadline, and the project turns AMBER if the deadline passes.

REPLACES

Drawings released by chance, old revisions still on site, and queries that sit with no owner and no date.

DIFFICULTY

Medium

CONFIDENCE

CONSERVATIVE SAVING

₹15,000 a month · 6 hours a month

> OWNER APPROVES You sign off every drawing before it is stamped Approved for Execution; nothing reaches a site without your approval in the queue.

5. AI AGENT SCOPING CALL

Archi Design Site Controller

A named AI employee that reads every Site Diary entry and the Project Health Wall each evening, compares site progress with the plan, chases pending drawings and vendor items, drafts the contractor and vendor messages for your approval, and sends you a short per-project report.

- Trigger: every evening after site reports are filed, and immediately when a project turns RED.
- Compares each site's reported stage with the planned milestone, names the specific drawing, material or contractor holding the next stage, and drafts the chase message to the responsible designer, vendor or contractor.
- Compiles reopened snags and repeated quality issues per site and per contractor so a pattern is visible before it becomes rework.
- Reports to you each evening in one short note per project: colour, next milestone, what is blocking it, and which drafts are waiting for your approval. Sends each designer only their own pending drawings.
- Never promises a date to a client, never commits to a contractor on extra work or cost, never changes a milestone; it drafts, you decide.

REPLACES

Your evening round of calls to every site and designer, and the follow-ups that were missed because the day ran out.

DIFFICULTY

CONSERVATIVE SAVING

₹20,000 a month · 20 hours a month

> OWNER APPROVES You approve every message that goes to a client, contractor or vendor about dates, extra work or cost before it is sent; the Site Controller only prepares the draft.

ACROSS THE WHOLE BUSINESS

DEPARTMENT	TODAY	WITH THESE SYSTEMS
Sales and enquiries	Enquiries come from Instagram, Just Dial and referral, handled by you mostly. Around 8 leads a month become 3 quotes and 2 orders, and 4 out of 100 quotes convert. Every quote, every price and every follow up is yours, and nothing is recorded beyond your phone.	The Archi Design Client Pulse Automation records every stage-wise client reply, and the Command Centre shows which client has not been heard from. Pricing and negotiation remain entirely yours. The automated CRM from your vision is a later stage once project data is flowing; the sheet shows it as not yet built.
Design studio	Designers work in the office on tasks you give each morning. Drawings go to site as WhatsApp images, revisions are hard to trace, and site queries arrive by phone call to whoever picks up.	Each designer opens the Archi Design Daily Task Sheet and sees only their own tasks with a definition of done. Drawings leave only through the Archi Design Drawing Release Flow after your sign-off, and the Site Controller sends each designer only their own pending drawings each evening.
Site execution	Site engineers work on site or field, coordinate contractors and vendors verbally, and report progress when you call. Photographs are scattered across groups and material needs are remembered the next morning.	The Archi Design Site Diary turns one evening entry into a stamped site report, a routed drawing query and a material requirement note. The Project Health Wall shows every live site as RED, AMBER or GREEN, and the Drawing Release and Site Quality SOP keeps superseded prints off site.
Accounts and project costing	Budgets, contractor bills, purchases and billing are tracked by you, and financial information is not stated in the brief beyond the average order value. Cost overruns are seen late.	Financial health sits in a locked tab of the Command Centre visible only to you, summarised from project data. Budget and costing automation is in your vision but is not built on this map; it is a 12 month item once site and drawing data is reliable. No system sets a price, gives a discount or commits to a contractor cost.
HR and people	Seven people, designers and site engineers. Managers and reporting lines are not stated. There is no standard format to measure work, so appraisal is argument and memory, and	The Archi Design SOP Skill writes the role-wise SOPs and the standard measurement format. The Scorecard App counts timeliness, quality, SOP adherence and rework the same way every week. The Ownership Board

DEPARTMENT	TODAY	WITH THESE SYSTEMS
	SOPs are not followed because they live in your head.	shows repeated misses as a pattern. Appraisal, incentive and consequence decisions stay with you and are shown to an employee only after you sign.
Owner's desk	Morning task giving, continuous follow up, evening status calls, every quote and every price, and the only person who knows the actual status of any project.	Ten minutes on the Archi Design Command Centre in the morning, an evening summary from the Digital Ops Manager and Nandini, an approval queue for drawings and client messages, and the rest of the day for client relationships, design excellence and growth, which is where you said you want to be.

STAYS HUMAN

- Pricing and negotiation
- Design judgement and client relationships: what a space should be, how a client is advised, and what you sign off as Approved for Execution.
- Decisions about people: hiring, appraisal outcomes, incentives, deductions and consequences for repeated mistakes are yours, with the systems only counting and drafting.

FIRST 90 DAYS

01 Weeks 1 to 2: sit with the Archi Design Task Ownership SOP Skill and the SOP Skill and write down the workflows for concept, working drawings, site marking, execution and handover, with a definition of done for each task.

02 Weeks 3 to 5: build and launch the Archi Design Daily Task Sheet on every phone, all seven people, done-with-proof and not-done-with-reason, and stop giving tasks by voice from the first Monday it is live.

03 Weeks 5 to 8: add the Archi Design Site Diary for the site engineers and

12 MONTHS

01 Months 4 to 6: build the Archi Design Project Health Wall and the Command Centre on top of the task, site and drawing data, with your RED, AMBER, GREEN rules, and begin the Client Pulse Automation on every closed stage.

02 Months 6 to 8: bring in the Site Controller for the evening per-project note and contractor and vendor drafts, and the Digital Ops Manager for the morning exception list and evening summary.

03 Months 8 to 10: add attendance consolidation and the employee

the Drawing Release Flow with your approval queue, so drawings and site reports flow into the same place as tasks.

04 Weeks 8 to 12: switch on the Ownership Board and the Nudge and Escalate Chain, and let Nandini start the 9 AM and 6 PM round so your personal follow up stops.

05 By day 90: the first monthly scorecards come out of the Scorecard App in the standard format, and you review them before anyone else sees them.

personal dashboards from your vision, feeding the same scorecards, with incentive eligibility calculated for your sign-off only.

04 Months 10 to 12: add project costing and cash flow to the locked financial tab, and record enquiries from Instagram, Just Dial and referral in a simple CRM, still with every quote and price in your hand.

05 By month 12: your working day looks like the one you wrote, ten minutes in the morning, exceptions only, and the weekly and monthly reviews come to you as reports instead of phone calls.

Taken conservatively from the layers above, these systems return around ₹88,000 a month and roughly 200 hours a month of follow up to Archi Design, most of it hours that are yours today.
